Superposition Principle for Electric Field

Electric field on line connecting two point charges:

Electric field of point charges in plane:
The electric field is a vector field:

\[ \vec{E}(\vec{r}) = \vec{E}(x, y, z) = E_x(x, y, z)\hat{i} + E_y(x, y, z)\hat{j} + E_z(x, y, z)\hat{k} \]

Properties of electric field lines (electrostatics):

- Electric field lines begin at positive charges or at infinity.
- Electric field lines end at negative charges or at infinity.
- The direction of \( \vec{E} \) is tangential to the field line going through the field point.
- Electric field lines bunched together indicate a strong field.
- Electric field lines far apart indicate a weak field.
- Field lines do not intersect.
Consider the $x$-component of the electric field.
