## REPORT.

*To His Excellency Elisha Dyer, Governor, and the Honorable General Assembly of the State of Rhode Island and Providence Plantations, at its January Session, 1899:*

I have the honor to submit herewith the Eleventh Annual Report of the Board of Managers of the Rhode Island College of Agriculture and Mechanic Arts, as required by law.

HENRY L. GREENE,

*President of the Board of Managers of the Rhode Island College of Agriculture and Mechanic Arts.*

## FACULTY AND ASSISTANTS.

---

JOHN HOSEA WASHBURN, PH. D.,

PRESIDENT,

*Professor of Agricultural Chemistry,*

B. S., Massachusetts Agricultural College, 1878; Graduate student, Brown University, 1880; Graduate student, Massachusetts Agricultural College, 1881-1883; Professor of Chemistry, Storrs Agricultural School, 1883-1887; Student in Göttingen University, 1885 and 1887-1889; Ph. D., Göttingen, 1889; Appointed President, 1890.

HOMER JAY WHEELER, PH. D.,

*Professor of Geology,*

B. S., Massachusetts Agricultural College, 1883; Assistant Chemist, Massachusetts State Experiment Station, 1883-1887; Graduate student, University of Göttingen, 1887-1889; Ph. D., Göttingen, 1889; Appointed Chemist of Rhode Island Agricultural Experiment Station and Professor of Geology, 1890.

\*ANNE LUCY BOSWORTH, B. S.,

*Professor of Mathematics,*

B. S., Wellesley College, 1890; First Assistant, Amesbury (Mass.) High School, 1890-1892; Appointed Professor of Mathematics, April, 1892; Graduate student at the University of Chicago, summer of 1894 and 1896.

E. JOSEPHINE WATSON, A. M.,

*Professor of Languages,*

A. B., Smith College, 1882; A. M., The Cornell University, 1883; Assistant in English, Smith College, 1883-1887; Student of North European Languages in Göttingen, 1887-1889; Appointed Professor of Languages, September, 1892; Student of French in Tours, summer of 1895.

WILLIAM ELISHA DRAKE, B. S.,

*Professor of Mechanical Engineering,*

B. S., Polytechnic Institute, Worcester, 1886; Instructor in Physics and Electricity, Worcester Polytechnic Institute, 1887; Instructor in Woodworking at Pratt Institute, Brooklyn, 1887-1893; Appointed Professor of Mechanical Engineering, 1893.

---

\* Absent in Europe for the year.

**\*OLIVER CHASE WIGGIN, M. D.,***Professor of Comparative Anatomy and Physiology,*

M. D., Harvard University, 1863; Practicing physician in Providence, 1866-1886; Visiting physician to R. I. Hospital, 1872-1882; Consulting physician to Dexter Asylum, 1875-1885; President Providence Medical Association, 1880-1882; President Rhode Island Medical Society, 1884-1886; Founder of the Providence Lying-in Hospital, and President 1884-1891; Appointed Professor of Comparative Anatomy and Physiology, 1893.

**WILLIAM WALLACE WOTHERSPOON,**

Captain 12th Infantry, U. S. A.,

*Professor of Military Science and Tactics,*

Appointed 2nd Lieutenant, 12th Infantry, October 1, 1873; Promoted 1st Lieutenant, March 20, 1879; Promoted Captain 12th Infantry, April 28, 1893; Appointed Professor of Military Science and Tactics, November, 1894.

**HARRIET LATHROP MERROW, A. M.,***Professor of Botany,*

B. S., Wellesley College, 1886; Teacher of Science, Plymouth (Mass.) High School, 1887-1888; Teacher of Science, Harcourt Place, Gambier, O., 1888-1891; Graduate student, University of Michigan, 1891-1892; A. M., Wellesley College, 1893; Graduate assistant, Botanical Laboratory, University of Michigan, 1893-1894; Appointed Professor of Botany, January, 1895.

**ARTHUR AMBER BRIGHAM, PH. D.,***Professor of Agriculture,*

B. S., Massachusetts Agricultural College, 1878; Engaged in practical farming, 1878-1888; Professor of Agriculture in the Imperial Agricultural College at Sapporo, Japan, 1888-1893; Graduate student at Göttingen University, 1893-1896; Ph. D., Göttingen, 1896; Appointed Professor of Agriculture, 1896.

**GEORGE WILTON FIELD, PH. D.,***Professor of Zoology,*

A. B., Brown University, 1887, and A. M., 1890; Ph. D., Johns Hopkins University, 1892; Assistant in Biology, Johns Hopkins University, 1891-1892; Occupant of Smithsonian Table at Naples Zoölogical Station, 1892-1893; Student at University of Munich, 1893; Associate Professor of Cellular Biology, Brown University, 1893-1896; Appointed Professor of Zoölogy, 1896.

**FRED WALLACE CARD, M. S.,***Professor of Horticulture,*

B. S., Cornell University, 1892; M. S., Cornell University, 1893; Assistant Horticulturist, Cornell University Experiment Station, 1893; Associate Professor of Horticulture, University of Nebraska, 1893-1898; Appointed Professor of Horticulture, 1898.

---

\* Resigned September, 1898.

## ADELAIDE SMITH, B. S.,

*Acting Professor of Mathematics,*

B. S., Wellesley College, 1890; First Assistant, Boone (Iowa) High School, 1893-1894; Graduate student at the University of Chicago, summer of 1894; Graduate student at the Columbian University, Washington, D. C., 1894-1895; Appointed Acting Professor of Mathematics, 1898.

## \* JAMES DE LOSS TOWAR, B. S.,

*Assistant Professor of Agriculture and in Charge of Civil Engineering,*

B. S., Michigan Agricultural College, 1885; Graduate student at Michigan Agricultural College, 1890-1891; Assistant Agriculturist, R. I. Experiment Station, 1891-1894; Appointed Assistant Professor of Agriculture, R. I. College of Agriculture and Mechanic Arts, 1893; Appointed in Charge of Civil Engineering, 1895.

## JOHN EMERY BUCHER, A. C., PH. D.,

*Associate Professor of Chemistry,*

State Normal School, Millersville, Pa., 1887-1888; A. C., Lehigh University, 1891; Ph. D., Johns Hopkins University, 1894; Instructor in Organic Chemistry, Tufts College, 1894-1897; Appointed Associate Professor of Chemistry, 1897.

## ARTHUR CURTIS SCOTT, B. S.,

*Assistant Professor of Physics,*

B. S., R. I. College of Agriculture and Mechanic Arts, 1895; Student at Harvard University, summer course in Physics, 1895; Appointed Instructor in Physics, 1895; Student at The Cornell University, summer course in Physics, 1896; Student at Massachusetts Institute of Technology, summer course in Physics, 1897; Student at Harvard University, summer course in Geology, 1897; Appointed Assistant Professor of Physics, 1897.

## MABEL DEWITT ELDRED, B. S.,

*Instructor in Drawing,*

B. S., R. I. College of Agriculture and Mechanic Arts, 1895; Student at Chase Art School, winter of 1897-1898; Appointed Instructor in Drawing, 1897.

## MARY WATKINSON ROCKWELL, B. L.,

*Instructor in Languages,*

Student at Göttingen, 1887-1889; Graduate, Norwich Free Academy, 1892; Student in France, 1892-1893; B. L., Smith College, 1897; Appointed Instructor in Languages, 1897.

## LUCY HARRIET PUTNAM,

*Instructor in Expression,*

Graduate of School of Expression, Boston, Mass., 1896; Instructor at summer session of School of Expression, Plymouth, Mass., 1896; Appointed Instructor in Expression, 1896.

---

\* Resigned May 1, 1898.

## THOMAS CARROLL RODMAN,

*Instructor in Woodwork,*

Appointed, 1890.

## HOWLAND BURDICK, B. S.,

*Assistant in Agriculture and Farm Superintendent.*

## HELEN ELIZABETH BROOKS,

*Instructor in Stenography and Typewriting,*

Student in Chandler's Normal Shorthand School, 1894; Graduate of Boston Normal School of Gymnastics, 1897; Appointed Instructor in Stenography and Typewriting, 1898.

## MARSHALL HENRY TYLER, B. S.,

*Master of the Preparatory Department,*

B. S., Amherst College, 1897; Instructor at St. Mark's, 1897-1898; Appointed Master of the Preparatory Department, 1898.

## JAMES SIDNEY ALLEN, JR., A. B.,

*Instructor in History and Political Science,*

A. B., Brown University, 1898; Appointed Instructor in History and Political Science, 1898.

## FRANK EDWIN CRAIG, B. S.,

*Instructor in Mechanical Drawing,*

B. S., Mechanical Engineering, Worcester Polytechnic Institute, 1898; Appointed Instructor in Mechanical Drawing, 1898.

## GEORGE BURLEIGH KNIGHT,

*Assistant in Ironwork.*

## NATHANIEL HELME,

*Meteorologist.*

---

**GRADUATE ASSISTANTS.**

---

## \*CHARLES SHERMAN CLARKE, B. S.,

*Assistant in Mechanics.*

## JOHN FRANKLIN KNOWLES, B. S.,

*Assistant in Woodwork.*

## \*LOUIS HERBERT MARSLAND, B. S.,

## THE COLLEGE.

### HISTORY.

**I**N 1863 the State of Rhode Island accepted from the United States Government the land grant scrip, which gave to each State thirty thousand acres of the public lands for each Senator and Representative in Congress. The land was to be sold by the States, or their agents, the proceeds arising from the sale invested, and the annual income derived therefrom was to be "inviolably appropriated by each State which may take and claim the benefit of this act, to the endowment, support and maintenance of at least one college where the leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to Agriculture and Mechanic Arts, in such manner as the Legislatures of the States may respectively prescribe, in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions in life."

On March 2, 1887, the act known as the Hatch Act was passed, appropriating \$15,000 annually to each State, for the purpose of establishing an Agricultural Experiment Station in connection with an Agricultural College or School.

From the time of the acceptance by the State of Rhode Island of the land scrip in 1863, there were many people who felt that this State did not offer to young men such advantages for instruction in agriculture and mechanic arts as others afforded that had genuine agricultural and mechanical colleges. So great was the dissatisfaction among the citizens of Rhode Island at the absence

of these educational advantages, that they were determined to have the Hatch Agricultural Experiment Station located at a *bona fide* agricultural educational institution.

The Rhode Island State Agricultural School was established according to Chapter 706 of the Public Laws, passed May 23, 1888.

The United States Congress, on August 30, 1890, passed an act known as the new Morrill Bill. This appropriated for the further support of the agricultural and mechanical colleges a sum beginning with \$15,000, and continuing, with a yearly increase of \$1,000, until the annual appropriation should reach \$25,000.

That the school already established might receive the benefit of the act of Congress, the General Assembly amended Chapter 706 of the Public Laws, incorporating the Rhode Island College of Agriculture and Mechanic Arts.

Since September, 1892, the institution has been conducted on a college basis, with an entirely new course of study.

On April 19, 1894, the Legislature passed an act authorizing the State treasurer to pay Brown University the sum of \$40,000, in consideration of which the University was to turn over to the State the proceeds of the original Land Grant of 1862, and to withdraw from the United States Supreme Court its suit for the Morrill Fund.

On January 27, 1895, the college dormitory was destroyed by fire; but it was replaced by a new granite building, which was ready for use the first of October of the same year, and which is now designated as Davis Hall.

At the January session of the Legislature, 1897, the institution was given an appropriation for a stone building, one hundred and thirty feet by forty feet, practically three stories high. The basement has three rooms used for instruction in photography and physics, and a large room devoted to electrical engineering. On the second floor are recitation rooms, chapel, library and reading-room, and young women's study-room. The third floor contains a large hall for drill and gymnasium purposes, above which are bath-rooms and lockers. The hall is also used for assemblies,

whenever larger audiences are expected than the chapel can accommodate. This building, now named Lippitt Hall, is well equipped with apparatus which the college has owned for some time, and has been waiting to place where the most benefit might be derived from it.

#### *GROWTH DURING 1898.*

During the past year, Mr. Marshall H. Tyler has been appointed instructor in civil engineering and master of the preparatory department. Mr. James S. Allen, Jr., has been appointed instructor in political science and history.

The health of the students has been unusually good. This improvement is largely due to the use of a gymnasium, which is ample for exercise when the weather and the condition of the grounds are such that it would be impossible to exercise in the open.

The special poultry course has become so popular that more persons have applied than it has been possible to admit, as the number is limited to twenty-five. The two years' preparatory department has already proved its usefulness, by linking the college course to that of the better country schools. For lack of room, it was necessary to limit the number of students.

#### *OBJECT OF THE INSTITUTION.*

The college stands for the idea that technical work, properly taught, possesses educative value equal at least to that furnished by the classics, but that premature specialization is to be avoided if the best results are to be attained; that technical education, to meet the requirements, must be based upon a sound knowledge of mathematics, the natural sciences, and the English language. The method employed is technical instruction in agriculture, in the mechanic arts, and in the sciences. The student who enters for a full course selects one of five courses, or groups. Each of these offers special facilities in the branches peculiar to it; and in

addition, extended studies in language and literature find a place in each course, as the student is impressed with the fact that the purpose of education is two-fold—to confer the utmost benefits upon the community through the individual, and, further, to give to the individual the utmost pleasure and satisfaction for himself.

By means of the preparatory department, opportunities are open to those whose previous preparation has not been so fortunate, and it is hoped that no one will be deterred from making use of them either from a lack of earlier advantages or of money. Thus far no worthy student has been compelled to leave the institution for lack of means. The instruction is free to any inhabitant of Rhode Island who is of good character and has the ability to take advantage of the opportunities here offered.

*Short courses in agriculture and certain lines of mechanics, and special work in science,* are open to those unable to take the regular college work. For these courses no examination is required, except such as will satisfy the professor in charge of any branch chosen that the applicant is prepared to derive benefit from the work he wishes to elect. Whenever possible, however, students are urged to enter one of the courses leading to a degree. The arrangement of these courses is the result of careful thought and long experience as to the best combination of studies to fit one for the various occupations in which a technical education is required; and it is believed that no such thorough preparation can be obtained from special courses selected by the student.

#### *REQUIREMENTS FOR ADMISSION TO PREPARATORY DEPARTMENT, 1899.*

Candidates for admission must bring testimonials of good character and must be not less than fifteen years of age. Oral and written examinations will be given in advanced arithmetic, geography, English grammar, and United States history. Each candidate will be required to write a short composition upon a subject announced at the time of the examination. The composition will be

expected to show familiarity with the works mentioned below : Hawthorne's Wonder Book, Dickens's Christmas Carol, Irving's Sketch Book, Scott's Lady of the Lake, Longfellow's Evangeline. Applicants for the regular course will find some knowledge of algebra of great assistance.

Students entering the preparatory department may take, together with the regular studies of this course, any other work from the college courses for which they are prepared.

#### *REQUIREMENTS FOR ADMISSION TO THE COLLEGE, 1899.*

Graduates from high schools, and other schools of similar grade, are admitted without examination, on certificates which are filled out by their principals. The candidate must apply to the college for the certificate, giving the address of his principal who is to certify him. The college will correspond with the principal, furnishing blanks for him to fill. Graduates from high schools are not admitted on diploma.

Candidates not entering the Freshman class on certificate will be examined in arithmetic ; algebra ; plane geometry ; English grammar ; advanced English ; United States history ; geography, physical and political ; one year of German, French, or Latin.

In the arithmetic examination especial attention will be paid to fractions, the metric system, simple and compound proportion, and square and cube root ; thorough drill in mental arithmetic will be necessary. The applicant should have mastered all of Wells's Academic or Wentworth's School Algebra, and Wells's Plane Geometry, or their equivalents. In geography, familiarity with some common-school text-book will be expected. Frye's geography is recommended. The history requirements will be met by familiarity with Fiske's or some similar United States history. The examination in English grammar will include definitions, formation of plurals, inflexion of nouns, pronouns and verbs, comparison of adjectives and adverbs, analysis and parsing, with especial attention to punctuation and the use of capitals. The

advanced English requirements are those prescribed for entrance to the New England colleges. The student will be expected to show familiarity with the works named below. These are divided into two classes. Those marked (*a*) are to be read, and the candidate will be required to show a general knowledge of their subject-matter and of the lives of the authors. Those marked (*b*) are to be thoroughly studied, so that the candidate will be able to pass an examination upon their subject-matter and structure. The books prescribed for 1899 are the following: (*a*) Dryden's Palamon and Arcite; Pope's Iliad, books I, VI, XXII, XXIV; The Sir Roger de Coverley Papers, in The Spectator; Goldsmith's The Vicar of Wakefield; Coleridge's The Ancient Mariner; De Quincey's The Flight of a Tartar Tribe; Cooper's The Last of the Mohicans; Lowell's The Vision of Sir Launfal; Hawthorne's The House of the Seven Gables. (*b*) Shakespeare's Macbeth; Milton's Paradise Lost, books I and II; Burke's Conciliation with America; Carlyle's Essay on Burns. For 1900: (*a*) Dryden's Palamon and Arcite; Pope's Iliad, books I, VI, XXII, XXIV; The Sir Roger de Coverley Papers, in The Spectator; Goldsmith's The Vicar of Wakefield; Scott's Ivanhoe; De Quincey's The Flight of a Tartar Tribe; Cooper's The Last of the Mohicans; Tennyson's The Princess; Lowell's The Vision of Sir Launfal. (*b*) Shakespeare's Macbeth; Milton's Paradise Lost, books I and II; Burke's Conciliation with America; Macaulay's Essays on Milton and on Addison. For 1901: (*a*) George Eliot's Silas Marner; Pope's Translation of the Iliad, books I, VI, XXII and XXIV; The Sir Roger de Coverley Papers, in The Spectator; Goldsmith's Vicar of Wakefield; Scott's Ivanhoe; Shakespeare's Merchant of Venice; Cooper's Last of the Mohicans; Tennyson's Princess; Coleridge's Rime of the Ancient Mariner. (*b*) Shakespeare's Macbeth; Milton's L'Allegro, Il Penseroso, Comus and Lycidas; Burke's Speech on Conciliation with America; Macaulay's Essays on Addison and Milton. For 1902: (*a*) George Eliot's Silas Marner; Pope's Translation of the Iliad, books I, VI, XXII and XXIV; The Sir Roger de Coverley Papers in The Spectator; Goldsmith's Vicar of Wake-

field; Scott's *Ivanhoe*; Shakespeare's *Merchant of Venice*; Cooper's *Last of the Mohicans*; Tennyson's *Princess*; Coleridge's *Rime of the Ancient Mariner*. (b) Same as 1901. The language requirements will cover one year's work in either French, German or Latin; and Latin is recommended. In French and German, this requirement comprises the essentials of grammar, easy reading, and elementary composition. In Latin, the candidate must be prepared to study *Cæsar*. The following text-books are recommended: Chardenal's *Complete French Course*, Lyon and De Larpent's *Primary French Translation Book*; the Joynes-Meissner *German Grammar, Part I*; Guerber's *Märchen und Erzählungen, Part I*, or Collar's *Shorter Eysenbach*; Collar and Daniel's *Beginner's Latin Book*.

#### *ADMISSION TO ADVANCED STANDING.*

Candidates may enter any of the higher classes for whose work they are prepared.

#### *OPPORTUNITIES OFFERED TO WOMEN.*

The courses offered to men are open to women, together with special courses. The women's dormitory will accommodate a limited number of students, and the college will on application find boarding-places for others in private families in town. Special waiting and study rooms are provided for the women who are day students.

#### *DOMESTIC SCIENCE.*

The college offers no separate course by the title of domestic science, but all young women candidates for a degree may receive instruction in domestic science as follows. In the fall term of the Sophomore year, there is offered a three-hour elective in the construction, ventilation, plumbing and heating of homes and school buildings. In chemistry, the adulteration of foods is

studied, and analyses of milk, water, dairy products, and fruits are made. Electives are offered in physiological chemistry, sanitary chemistry, and the chemistry of cooking. Hygiene and the physiology of digestion are treated in the courses in zoölogy.

#### EXPENSES FOR WOMEN.

Board, including room rent, is three dollars per week. Fuel and lights are supplied at cost. Rooms are provided with necessary furniture, including mattresses, but no other bedding material. Other expenses are as given below. The women have an opportunity to do their own washing and ironing. A Singer and a Household sewing-machine are at the disposal of all those living at the dormitory.

#### EXPENSES.\*

Tuition is free to all Rhode Island students. The regular expenses are tabulated below :

	Per Year.	
	Minimum.	Maximum.
Room rent, \$3 per term. ....	\$9 00	\$9 00
Board, \$3 per week, for 36 weeks.....	108 00	108 00
Fuel, spring and fall terms, each \$3; winter term, \$6.....	12 00	12 00
Light, \$1 to \$3 per term. ....	3 00	9 00
Books .....	15 00	30 00
Washing, 30c. to 60c. per week .....	10 80	21 60
Uniform for military drill, \$15.....	7 50	30 00
Reading-room tax, 25c. per term.....	75	75
General expense, for damage in building, etc., 50c. per term.	1 50	1 50
Laboratory fees, \$2 to \$10 per term.....	6 00	30 00
	\$173 55	\$251 85

The amount of laboratory fees depends upon the laboratory work taken each term. One dollar per term is charged for each of the following: botanical, zoölogical and physical laboratories; carpenter shop; wood-turning; forge shop; machine shop and

\* For exceptions in the expenses for women, see above.

wood-carving. This pays for the material ordinarily used in class work and for the wear and care of tools and apparatus. Any person who breaks apparatus or tools, through carelessness or neglect of instructions, will be charged the cost of the same. The chemical laboratory fee is three dollars per term for qualitative, quantitative and organic laboratory work. This covers general chemicals and use of apparatus. Students are required to pay for breakage and for any chemicals they may use in making special preparations for themselves. Graduates pay the cost of diplomas, five dollars. *No diploma will be issued until the candidate has paid all term bills.* Every able-bodied male student is required to drill and to wear a uniform. The uniform must be paid for immediately on entering the college, when the students are measured for the suits. When worn only on drill and properly cared for, one uniform may last two or more years. The student may, however, wear his uniform all the time. Day students are required to deposit five dollars per term in advance. The college conveys students daily to and from the railroad station free of charge. Once at the beginning and end of each term, a team conveys trunks to and from the station. Boarding students shall pay term bills in advance, deposit fifty dollars each term, or give bond for two hundred dollars for the payment of all bills. No bond will be accepted from any member of the faculty. A reduction of fifty cents per week on board is allowed students going home Friday afternoon and returning Monday forenoon, provided that notice of the intended absence is given in advance. Those failing to give such notice will be charged full price for board. No other reduction is made for less than three whole days' absence at one time, and this only when notice is given as above. Fifteen cents extra is charged for each meal sent to a student's room, from sickness or any other cause. *All students in the men's dormitory are required to supply their own furniture and bedding.* The necessary furniture may be obtained at the college when desired. A room may be furnished for from eight to ten dollars. Iron bedsteads three feet wide are included under room-rent. The furniture, if

properly kept, may be sold, when the student leaves, for one-half to three-fourths the original price. All clothing should be distinctly marked.

#### *SELF-HELP.*

A limited amount of work about the buildings, on the farm, at the experiment station, and in the laboratories, will be furnished to students who desire it, and who prove industrious and trustworthy. Good students, who desire to help in paying their expenses, should be able to earn from twenty-five to one hundred dollars per year, depending upon the amount of time they can spare from their studies. *No work is given to students who have not a fair standing in their classes.* The larger sums can be earned only by students who spend their vacations here at work. These opportunities are offered only to students who show a sense of responsibility in the performance of the duties assigned to them, and a disposition to render a fair equivalent of work for the compensation they receive.

#### *THE LIPPITT PRIZE.*

The Lippitt prize consists of a purse of one hundred dollars, offered through the generosity of ex-Governor Charles Warren Lippitt. This sum is divided into two prizes, the first of sixty, and the second of forty dollars, which are awarded to the best written and delivered essays on the history of Rhode Island in the Revolution. These essays are of the nature of Cincinnati orations, and are read on the Monday preceding commencement. In 1898 the successful competitors were Mary Winifred Dimock, Merrow, Conn., first prize; Ebenezer Payne, Lyons Farms, N. J., second prize.

#### *REGULATIONS OF THE COLLEGE.*

Students who do not understand the elements of gentlemanly conduct will not continue to be members of the institution.

Students rooming in the dormitory are expected to conduct themselves with the same decorum as in a private house. Any undue noise or actions liable to disturb the other occupants of the building will cause the offender to be publicly warned; and on a repetition of the offence, he will be dismissed from the dormitory, for a stated time or permanently, according to the nature of the offence. Money paid for dormitory expenses will not be returned to any student thus dismissed.

Negligence or absence from class duties of any kind will be vigorously opposed. Students are expected to attend all recitations. Any student absenting himself from more than ten per cent. of the total number of recitations in any subject shall not be allowed to take his examination in that subject, except by special vote of the faculty, but shall be conditioned.

Examinations of conditioned students shall be held only on the days assigned in the college calendar. Any student, who, after such examination, shall still have three or more conditions, shall be obliged to withdraw from the college. Students still having not more than two conditions may take second examinations at the next regular time, and failing to pass, shall have no further opportunity to remove such conditions except by special vote of the faculty.

A student wishing to take an examination to remove a condition must make application for the same to the professor in whose department the condition was received, at least seven days before the date of examination.

Students shall be exempt from examination at the end of the term in studies in which their term averages are above eighty per cent.

Every student who is a candidate for a degree shall prepare a thesis, and shall submit it to the president of the college at least one month before the time for granting the degree.

No student shall publish any article in any college, class or society publication designed for public circulation, or deliver any address at any meeting on the college campus attended by persons

other than students, without the consent of the president or some person appointed by him for granting such permissions.

No student shall represent the college on the athletic field, or any other organization before the public, who is not regularly registered and in good standing; by good standing is meant conformity to all the rules of the college.

#### *PUBLIC WORSHIP.*

The students are expected to be present at chapel exercises every morning, and on Sundays to attend service in some church at least once a day. Absence from chapel must be reported at the president's office for excuse on Tuesday morning of each week. A branch of the Intercollegiate Young Men's Christian Association is doing good work among the students, as is also the Young Women's Christian Union. Eminent preachers are from time to time invited to address the students.

#### *LOCATION.*

The college is situated on a hillside, which furnishes it with quick drainage and a delightful view. It is less than two miles from the railroad station. A macadamized road leads from the grounds to the station, insuring at all times a good walk and drive. The railroad station is situated on the New York, New Haven & Hartford R. R., with twenty-one trains daily, in the winter, stopping at Kingston, and more in the summer. The town is a very healthful place, five or six miles from the ocean.

## *DEPARTMENTS OF INSTRUCTION.*

---

### *CHEMISTRY.*

Instruction in chemistry begins with the third term of the Sophomore year, and consists of recitations and lectures with laboratory work. Any branch of chemistry may be elected for special work. Since 1897 a chemical course has been offered. General chemistry is taught during the last term of the Sophomore and the first term of the Junior year, in three exercises of recitation and lectures and one exercise of laboratory work each week. Special attention is given to inorganic preparations and problems. Qualitative analysis extends through two terms and is followed by volumetric and quantitative analysis. A course in organic chemistry, in the winter term of the Junior year, treats of the hydrocarbons and their derivatives as far as the benzene series; three exercises per week being devoted to recitations and lectures, and one exercise to laboratory work. The class work is based upon Remsen's Organic Chemistry, and the laboratory practice on Gattermann's Practical Methods of Organic Chemistry. An elective on the benzene series, with two recitations and one exercise of laboratory practice per week, is given in the spring term. The instruction in agricultural chemistry consists of lectures and recitations with laboratory work upon artificial digestion; analysis of soils, fodders, and fertilizers, milk, butter, and cheese; tests for poisons in the stomachs of different animals; analysis of fruits for sugar, starch, and albuminoids; and the study of chemical changes in soils. Women may substitute for agricultural chemistry an elective in the chemistry of cooking.

A five-hour course in sanitary chemistry or in physiological chemistry may be taken by students who have completed courses I, II, III, and IV. Elective work in the dyeing of wool, cotton, and silk, and of mixtures of the same, is offered to those who have finished the courses in general and organic chemistry and quantitative analysis.

### PHYSICS.

Instruction in physics begins with the first term, Freshman year, and consists of lectures and recitations attended by all regular students. The various branches grouped under this head are treated both mathematically and experimentally, particular attention being given to practical application. Heat and sound are studied in the fall term, magnetism and electricity in the winter term, and light and mechanics in the spring term. The winter term is devoted entirely to the study of electricity and magnetism. The advanced study of light embraces an extended discussion of photography, photo-micrography, the use of the microscope and of the projecting lantern. This department is fully equipped to illustrate the use of any form of light employed at the present time in projection work, together with all accessories, including the projection microscope and apparatus for the projection of photographs in original color.

A course in advanced physics is open to all students who have completed course I, or its equivalent. This course includes a deeper and more theoretical study of the subjects of course I, and is treated by lectures and recitations, together with an extended course in laboratory work, designed to make the student more careful and accurate in his work and to encourage original investigation.

A special course in electricity is now open to all students having an elementary knowledge of the subject. As a foundation for subsequent work, instruction is given in the theory of electricity, together with thorough consideration of the various technical applications of electricity, including land and sub-marine telegraphy,

the telephone, electric lighting, and the electrical generation and transmission of power. Advanced instruction is given in electrical measurements, including the use of the storage battery (which is constantly becoming more valuable to electric plants), methods of electrolysis, electro-plating and electro-metallurgy, together with a practical understanding of generators and the testing of telegraph and telephone lines.

Special instruction in photography is offered in an elective course to students who have an elementary knowledge of physics and chemistry. The course embraces lectures and recitations upon the subject, together with practical methods of photography in the working of negatives, photographs, bromide enlargements, and lantern slides. The college is supplied with the most approved form of apparatus for X-ray photography, and the theory of the work in this line is taught, together with its practical applications. Special rooms for photographic work are provided, which will aid greatly to improve the instruction in this branch.

Facilities for instruction in physics are now of the best. A large room in Lippitt Hall is arranged especially for laboratory work, and the apparatus room adjoining is sufficient to hold the lecture-room and experimental apparatus, with which the department is well equipped.

A course in electrical engineering will be open to students as soon as the large laboratory provided in the basement of Lippitt Hall can be properly equipped with machines for experimental work. This laboratory is already provided with two sixty horse-power boilers, three engines, one of which is a fifty horse-power Armington and Sims, used in connection with an Eddy twenty-five K. W. machine for lighting the college, and one eight K. W. dynamo that is used for experimental work. A storage battery of 110 chloride accumulator cells is also in place for the course.

#### *PHYSIOGRAPHY.*

The Freshman class study physiography during the first term, with three exercises per week of recitation and one of laboratory

work, with occasional excursions and field work. A well equipped physiographic laboratory, with globes, models, maps, charts and other illustrative material, together with a special library, is open to the students. Especial attention is given to the scientific phases of the study—to the chemistry and geology of the soils, the influence of air and water on the same; and some reading and time are expended on the flora and fauna of the different countries. Tarr's Physical Geography is taken as a basis; and Dana's Coral Islands, Shaler's Aspects of the Earth, and Dana's Characteristics of Volcanoes are thoroughly studied during the term. Five hundred lantern slides, illustrating ethnological subjects, are projected and explained before the class. This course seems especially valuable to introduce the student to the scientific studies which are to follow.

#### *AGRICULTURAL GEOLOGY.*

The course in agricultural geology embraces structural, dynamical and historical geology, particular attention being paid to the first mentioned subdivision. A careful study is made of those minerals and rocks of importance in the formation of soils, of the agencies by which their decomposition is effected, and of the compounds which result. In this connection the instruction is designed to familiarize the student with the desirable mineral and physical features of soils, with those compounds the presence of which is undesirable or which may give rise to a greater or less degree of soil sterility, and with the means by which such conditions may be avoided or overcome. A proportionate amount of time is devoted to the history of those natural deposits of particular interest to agriculturists; such as nitrate of soda, the German potash salts, and phosphates of various kinds.

#### *BOTANY.*

The required work in botany for students in the agricultural, biological, and chemical courses begins in the winter term of the

Freshman year with a course called the biology of plants, which continues three terms. The object of this course is to give the student a knowledge of plant life, by the study of plants themselves in the laboratory and in the field. Attention is given to representatives of the vegetable kingdom from the lowest to the highest. Some time is given to the determination of species, but the chief work of the course is the study of the structure of the plant, its activities, and its relation to its environment. In short, the course is adapted to the needs of the general student who desires a knowledge of the principles of biology as illustrated by our common plants, and also furnishes a good foundation to the student who is to follow more advanced work in botany, agriculture, horticulture, or medicine.

Each student is supplied with a compound microscope, a dissecting microscope, re-agents and small instruments. The laboratory is provided with apparatus for simple physiological experiments, a microtome, paraffin bath, charts, thirty Brendel models, Briosi and Cavara's Parasitic Fungi of cultivated plants, Ellis's Fungi Columbiani, Seymour and Earle's Economic Fungi, and an increasing collection of native plants. A good working library and several American and foreign periodicals are an important part of the equipment of the laboratory.

It is believed that excellent advantages are offered for those who wish to elect work in the parasitic fungi of seed-plants. The laboratory is provided with a supply of dry and alcoholic material, and collecting fields for fresh material are near at hand.

### ZOÖLOGY.

The courses are open to students who have done satisfactory work in the biology of plants, or an equivalent.

The study of zoölogy is especially valuable for training students to *see*; for strengthening proper individuality of thought and action; for cultivating power to feel rightly towards "all things, both great and small;" for creating an ever-freshening interest in

and sympathy towards all conditions of life. The courses offered are designed to meet needs of three sorts:

(A) Of students who will manage farms. To agricultural students are recommended courses I-VI on animal biology; zoölogy of the farm animals; zoölogy of the domestic fowls; the principles and practice of aquiculture; entomology; comparative animal physiology; and the spring fauna of Kingston,—as described under zoölogy in the courses of instruction.

(B) Those who wish to prepare themselves for careers in medicine, veterinary and sanitary science are recommended to take as advanced work, after pursuing the above, phylogeny of animals (general zoölogy), comparative anatomy of the vertebrated animals, comparative normal histology, advanced animal physiology.

(C) Those who wish merely a general knowledge of zoölogical science sufficient to comprehend and to profit by the important current discussions bearing upon man's relations to his environment are recommended to take: Animal biology (satisfactory completion of the course in biology of plants, or the equivalent, is a necessary prerequisite), followed, if desired, by entomology, and the spring fauna of Kingston.

Special attention is called to two features: (1) The strength of the course in zoölogy as applied directly to general agriculture, and as furnishing an adequate basis for understanding our domesticated animals. (2) The course adapted for preliminary training for students who wish to become, after graduation, science teachers in the public schools, or to enter schools of human or veterinary medicine and surgery.

We in this country do not adequately appreciate the importance of the veterinary profession. Veterinary medicine and surgery should cover a wide field. The veterinarian should not only diagnose disease and prescribe medicines, and by skillful surgery allay suffering or save a valuable animal, but he should be an intelligent adviser in the science of breeding. The close relations between diseases of animals and man; e. g. tuberculosis, tetanus (lock-jaw), anthrax (malignant pustule), typhoid fever, etc., call

for veterinarians who, by nature and training, are capable of becoming strong members of municipal boards of health, and of combating destructive contagious diseases. They should be experts in sanitary science, in the inspection of meat, milk and foods; they must understand fully the principles and practice of feeding; the physiology of alimentation, gestation and parturition. That the field is important is shown by the figures that the domestic animals of the country are valued at over two billions of dollars; that a single disease, hog-cholera, destroyed thirty-five millions of dollars worth of property last year, and there are other diseases quite as destructive.

The demand for veterinarians and the dignity of the profession increases as it becomes more and more firmly established among the people that both private and public economy, as well as humanity, demands the preservation and improvement of the domestic animals. Many states have passed laws regulating the practice of veterinary medicine and surgery within their borders. A new era is opening which is destined to place veterinary science among the learned professions; for certainly few aims in life can be more commendable than to aid in insuring to man a proper, clean, wholesome food supply.

While the college work thus far deals almost entirely with studies preliminary to the main subject, it is confidently believed that such training as is here afforded will be far superior to that furnished by a prolonged course of lectures in the pure practice, or even by actual clinical work before poorly grounded students. It is expected that this course will deal sufficiently with theory and practice to enable one to treat intelligently all practical cases on the farm. There is no doubt whatever that a student who has satisfactorily completed such a preliminary course will be remarkably well fitted to take high rank in any of the great medical and veterinary colleges of the country, or in special cases to be admitted to advanced standing.

In pure and applied zoölogy, proximity to the sea-coast renders possible the study under natural conditions, as well as in aquaria,

of the habits and development of many marine animals. The experiment station's marine laboratory, under the direction of the professor of zoölogy, is open to students who show capacity for effective work. It is located on the shores of the town, near Point Judith, and offers excellent opportunities for original investigation and experimentation upon problems of marine biology.

Further opportunities for study are furnished by springs, streams, ponds (natural and artificial), and lakes, upon or immediately adjacent to the college grounds. These added to the location of the college township—in the southeast corner of Rhode Island, its shores bounded by Narragansett bay, and by the Atlantic—render the institution an ideal locality for biological study.

The department is provided with Leuckart's charts; Zeigler's and other models, manikins elucidating the anatomy of man, horse, and fowl; preparations of skins and skeletons of typical vertebrated animals; including not only the domesticated animals but also such rare forms as the gorilla, chimpanzee, lemurs, phalangers, manatee, and sloth; birds and mammals peculiar to the Australian region; the lung-fishes (Dipnoi); the Surinam toad; the giant salamander (*C. japonicus*); preserved specimens and preparations of the most important invertebrated forms; including *Nautilus* in the shell, *Argonauta*; apparatus for class demonstration of macroscopic and microscopic preparations. The department library includes the best literature on the subject; all of the current zoölogical journals are available, either at the experiment station library, or by special arrangements. Particular attention is given to the collection illustrating the zoölogy of Rhode Island.

Advanced courses are open to students who have had the requisite training. Comparative normal histology, dealing with the microscopical structure of cells and tissues of the organs of the lower and higher animals, including modern methods of microchemical technique and histological investigation, is a course particularly adapted for students who intend to fit themselves for the medical and veterinary professions. Courses in comparative

anatomy of the vertebrated animals, and in comparative embryology are offered to students who are sufficiently advanced.

General comparative embryology is covered in the courses in plant and animal biology.

Students who wish to make a specialty of biological science, for the purpose of becoming science teachers or of pursuing a medical and surgical course, are advised to give the utmost possible attention to physiography; chemistry; physics; English; German; French; Latin; free-hand drawing, including water colors; and psychology, in addition to the purely biological sciences.

Students are urged to consult freely with their instructors in regard to selection of courses.

#### *PSYCHOLOGY.*

An elective course in psychology is offered during the winter and spring terms, to Juniors and Seniors. James's Briefer Course is used. Lectures and recitations are supplemented by reading and simple experiments.

#### *AGRICULTURE.*

In connection with the new course in agriculture, it may be said that the foundation instruction is largely given in the study of chemistry, botany, physics, geology, anatomy, physiology, zoölogy, and economics.

Following upon this fundamental knowledge, it is the aim in the agricultural course to teach the student the practical application of the scientific principles underlying technical agriculture. This is sought to be accomplished by means of lectures and recitations and by the use of text-books and reference books so far as available. The chief desire is to supplement, enforce and fix this instruction by what may be termed laboratory work in agriculture; that is, by actual educational practice in the different branches of farming.

Commencing in the spring term of the Freshman year, an introduction is given in the form of lectures dealing with the origin and necessity of agriculture, its relation to other occupations, the preparation for farming, the relations of air, water and sunshine and of plant and animal life to agriculture. In the Sophomore year a study is made of farm soils—their characteristics, classification and adaptations, their faults and means of improvement, clearing land and preparing for crops, irrigation and land drainage, with practice in planning and constructing systems of underdraining on the college farm. In the winter term instruction is supplied in the construction, use and care of farm implements, machines and vehicles; and in the arrangement, construction, and maintenance of farm buildings, fences, roads, and bridges. In the spring term fertilization is dealt with, and the instruction is reinforced by object lessons offered by the fertilization experiments of the experiment station department and by the manuring for the farm crops.

In the first term of the Junior year field crops are considered. During this year horticulture is chiefly taught. (See horticulture.)

In the Senior year opportunity is provided to study live stock husbandry, including the breeds, breeding, care and management of farm animals; rational feeding of live stock; dairy husbandry; poultry culture; farm management and accounts.

Further elective subjects are available to advanced students by special arrangement, including the history and economics of agriculture, agricultural and horticultural literature, farm law, apiculture, agricultural debate, and agricultural experimentation.

During the course in agriculture occasional inspection excursions will be made by the classes to learn what practical, successful specialists in the various branches of modern farming are doing.

Plans for short courses in agriculture have been made. These courses will instruct special students in the principles and details of the best modern practical poultry raising and dairy farming. For placing these special courses in full operation the college

awaits the providing by the State of additional suitable buildings and equipment, which will also greatly reinforce the means of instruction in the regular agricultural course.

### *HORTICULTURE.*

Work in horticulture is designed for students from all groups. It is felt that some knowledge of the subject may very properly form a part of every well rounded education.

In the introductory course the aim will be to discuss principles of general importance to all who have to deal with orchard or garden crops. The courses in pomology and vegetable gardening are designed to give practical instruction in the growing of fruits and vegetables.

Landscape gardening is especially recommended to those who seek to appreciate the beautiful in nature or in art. Its aim is the search for beauty as evinced in the work of nature, softened by the touch of art.

Forestry touches problems of import to every citizen interested in the public welfare. Owing to the intimate relation between forests and waterflow, the subject is often of more vital importance to the manufacturer than to the farmer.

The subject of plant-breeding will appeal chiefly to those interested in the broader problems of biological development and relationship. A careful study of the amelioration and development of plants under culture throws light upon many of the general problems of evolution which are of interest to all thinking students.

The courses in reading and original investigation are designed chiefly for students who wish to make a specialty of horticulture.

### *LANGUAGES.*

The subjects grouped under this head are English, German, French, Latin, and expression.

English—comprising composition, rhetoric, and literature—may be studied throughout the course. It is required during the preparatory years and the first three years of the collegiate department. The preparatory students review English grammar, and study the works prescribed for entrance to the New England colleges. The theory and practice of rhetoric are taught throughout the Freshman year, and the application of rhetorical principles is sought in themes and illustrative readings. The Sophomores make a critical study of certain prose masterpieces and write essays and various short papers. The required work of the Juniors consists of a study of the great English poets from Chaucer to Tennyson. Collateral reading is supplied, and students are encouraged to special investigation along literary and historical lines. In the Senior year electives are offered at present in literature and themes. In 1901 work in historical English and argumentation may also be taken. In the new courses three years of foreign language study are required for graduation, one preparatory and two advanced. It is desirable that two of the three years be spent upon one language.

A three years' course in German has been arranged, which may be begun in either the Freshman or Sophomore year. As far as possible the language itself is made the medium of instruction, and the subject is studied in grammar work, dictation, conversation, and translation—from English into German and from German into English. The course is carefully graded. As soon as a small vocabulary is acquired, the student begins the reading of simple prose and poetry, passing gradually to more difficult texts.

French is begun in the preparatory year and may be studied three years. Seven courses are offered. The instruction in this language is similar to that given in German. Grammar, conversation, dictation, translation, and composition are taught.

Latin is elective except in the preparatory department. The college offers a two years' course. Should a student wish to pursue the subject farther, he may do so at his own expense, by taking private lessons of the instructor. Much attention is paid

to derivation of words, in order that such study may aid in comprehending the terminology of science.

The aim of the course in expression is to teach one to read easily and intelligently, and to think accurately and rapidly. The work consists of sight reading, extemporaneous speaking, recitations, the delivery of original orations, and the study of various forms of poetry and prose. Expression is elective throughout the course.

In the building of Lippitt Hall excellent accommodations were provided for the library. Students now have freer access to the books than was possible before, and the library is proving a valuable addition to the educational facilities of the college.

#### *HISTORY AND POLITICAL SCIENCE.*

The courses in history and political science cover five terms, and are elective for Juniors and Seniors.

A continuous course in United States history is offered during the fall and winter terms. The library is well equipped in this department, and is made much use of, in reports and essays, by the pupils.

Political science I, offered in the fall term, consists of a study of the origin, development, and present structure of our government—town, city, county, State, and national. Special attention is paid to municipal problems, and to the United States constitution. Extensive use of the library is necessary. The winter and spring terms are devoted to political economy, based upon Walker's Advanced Course. In the spring term special consideration is given to the application of the general principles to banking, finance and other present day problems.

#### *MATHEMATICS.*

Three courses in mathematics are prescribed for all candidates for a degree; the subjects being higher algebra, plane trigonometry, and solid and spherical geometry. The work extends throughout the Freshman year, and is of the utmost importance, both as

a basis for further work in mathematics and science, and as a means for developing the power of logical reasoning and of exact and concise expression. It is the aim throughout the course to select such problems and applications as shall have direct bearing upon practical subjects.

Courses in analytical geometry and calculus are required of students in the mechanical and physics-mathematical courses, in addition to the above, and a number of electives are open to students who propose to make a specialty of mathematics or of any of the sciences which depend largely upon it.

The course in analytical geometry includes the subject of loci and their equations, the analytical demonstration of many geometrical theorems, and the simpler properties of the conic sections. The work in calculus includes the differentiation of algebraic, trigonometric, anti-trigonometric, exponential and logarithmic functions, successive differentiation, and the integration of simple functions, illustrated by applications to the rectification of plane curves, the areas of plane curves and the surface and volume of solids of revolution. The fundamental formulas of mechanics are developed and illustrated. The more familiar devices for integration are studied, and a short time is devoted to the interesting subject of curve-tracing.

Students wishing to prepare for advanced work along the lines of mechanical or electrical engineering are especially advised to elect the courses offered in advanced integral calculus, analytical mechanics, and differential equations, while those who desire an insight into the development of modern pure mathematics may elect work in projective geometry, modern analytical geometry, theory of equations, and theory of functions.

Two elective courses are offered in astronomy, one in practical astronomy, in which the simpler problems of practical astronomy are discussed, and a lecture course in physical astronomy, the aim of which is to make the students familiar with the general characteristics of the various members of the solar system, and to emphasize the general laws which govern the universe. A four-inch

LADD LABORATORY.

COURSE OF JOINERY.

COURSE IN SCROLL-SAWING.

equatorial telescope, an eighteen-inch celestial globe, a large collection of lantern-slides of astronomical phenomena, and a small but carefully chosen reference library, add greatly to the resources of the department.

In civil engineering three courses are offered. Plane surveying is taken up by the agricultural Sophomores in the spring term, and is followed by a course in leveling, grading, and road construction during the first term of the Junior year. This work is supplemented by practice with the compass, chain, and transit in measuring areas and plotting land, as well as work with the levels, drawing profiles, and establishing grade lines for roads. More advanced work in engineering is offered the Seniors in the spring term, while throughout the course practical surveying is given those students desirous of doing extra work in this line.

#### *MECHANICAL ENGINEERING.*

The aim of this department is to give sound theoretical and thorough practical training to students who seek to prepare themselves for useful and responsible positions. No attempt is made to teach trades; but the course offered in shop-work will furnish such training as will ensure, other things being equal, marked success in mechanical pursuits subsequent to graduation. The regular four years' course deals with mechanical engineering as applicable to the industries carried on in New England, and particularly in Rhode Island. Special attention is given to the designs and the economical operation of shops and mills, and of manufacturing and industrial machinery. Thorough courses in mathematics, physics, chemistry, electricity, English, French, and German are made the basis of this work. The subjects of mechanism, metallurgy, heating and ventilation of buildings, engineering specifications, and laws of contracts are treated by lectures and text-books. The several laboratories are well equipped for working in wood and metals and for the testing of materials used in construction. Students in the department of mechanical engineering receive instruction in bench-work in wood, wood-turn-

ing, pattern-making, forging, machine-shop work, and mechanical drawing.

Students in the agricultural department receive instruction in wood-working and forging, and may elect other work with the advice and consent of the committee on studies. Women are given the opportunity to elect wood-carving at any time during the four years' course. During the winter term of three months, the shops are open to receive persons who may wish to enter the college and take up special work of a trade nature in any of the above lines. In addition to this work, these students may take a limited amount of time for the study of any related subject.

The carpenter shop contains benches and tools sufficient to accommodate twenty-four students at one time. The course is designed to give skill and confidence in working the various kinds of wood, and also to impart a fair knowledge of the principles of building and construction. A series of practical lectures upon the art of estimating the cost of various constructions of wood is given to the agricultural students of the Sophomore year. The wood-turning room contains thirteen lathes, each with its complete set of gouges and turning-tools. In the same room are benches for pattern-making, and also power machinery for working wood; such as circular saw, hand saw, jig saw, surface planer, buzz planer, mortising machine, dowel machine and others. All students take wood-turning, and during the period each has practice under the direct charge of the engineer in care of the shop, boiler and engine. This engine is of thirty horse power; and besides furnishing power for the shop, drives a ten K. W. dynamo for lighting the building. The work in pattern-making given to the students in the mechanical department in the Junior year consists of the making of selected pieces to illustrate the principles of shrinkage, drafts, finish, core-box making, built-up work, and the general requirements of pattern-making.

The forge shop will accommodate twelve students at one time. It contains twelve forges and anvils, a stock cutter, a bolt header, a post drill, and is well supplied with all the hammers, tongs, and

COURSE IN WOOD-TURNING.

THE CARPENTER SHOP.

THE WOOD-WORKING MACHINERY.

PATTERN-MAKING.

other forge and anvil tools necessary for complete work. A regular course is followed here as in other lines ; and for the students of the agricultural department the work is of such a nature as is found about a farm. The various operations of drawing, bending, upsetting, and welding are taught and applied in the making of such useful pieces as staples, hooks, chains, and iron work for farm tools. The students of the mechanical department follow a similar course but in a direction more suited to the machine shop. Bolts, nuts, machine forgings, chisels, and lathe tools are made, and afterward put to practical use.

Only students in the mechanical department work in the machine shop. The course here is designed to give a sure knowledge of and intelligent practice in the best modern methods of using the various tools ; such as, lathes, planers, drills, milling-machines, and grinding machines. A course of hand work at the bench is offered, and includes instruction in chipping, filing, scraping, and finishing. Each student in the machine shop builds a complete machine before finishing the course. Students of former years have made an engine, dynamo, speed lathe, full set of arbors, set of nut arbors, and a variety of other tools.

In experimental engineering the students make tests of engines, boilers, pumps, steam gauges, injectors and a hydraulic ram. The strength of materials is investigated theoretically in class under the head of mechanics of materials, and practically in the laboratory by conducting tests upon specimens of wood, iron, steel, brick, stone, cement, boiler plate, etc. In hydraulics, water meters are calibrated and measurements of water made by orifices and wiers. During the spring term of the Senior year the class in mechanical engineering holds semi-weekly conferences ; reports are given upon articles in the industrial magazines and journals, and engineering subjects of general interest are discussed. The following are some of the topics considered : types of steam boilers, furnaces, boiler feeders, fuels, lubricants, gas and heat engines, preparation and use of wood, cutting tools for metals, pumping machinery.

Mechanical drawing is taught throughout the Sophomore and Junior years. Students are required to keep notebooks, in which freehand sketches are made from models; and these sketches are afterward worked up into finished drawings. The making of working drawings for some machine completes the course. Practice in tracing and blue printing is given to all students. The course in drawing is designed to aid in the corresponding courses of shop work and not to produce professional draughtsmen.

**FREEHAND DRAWING.**—Freehand drawing is taught only in the fall and spring term, and is required in the fall term, Freshman year. The required work comprises the study of perspective and especially of values from objects, still life, and simple casts. Memory sketches of all objects drawn are expected of each student. The sketch class is an interesting feature of the department. This meets for one hour once a week and is conducted by its members, who pose in turn or find a substitute. These time sketches from life, without instruction, are of great benefit to the student, teaching him to note quickly the effect desired. Each student is required to leave at the college a specimen of his work. The library of the studio has a good nucleus of art books.

In addition to the art electives, comprising drawing from life and the cast, painting in oil, pastel and water color, modeling, and the history of art, special work will be arranged for scientific and mechanical students.

#### *MILITARY SCIENCE AND TACTICS.*

The military department is duly organized under Captain William W. Wotherspoon of the 12th Infantry, who was assigned to duty as professor of military science and tactics, by the president of the United States, by special orders No. 257, from the war department, dated November 1, 1894.

It is the intention of the United States government, in organizing the military department at colleges, to prepare the young men of the country to perform with skill and understanding those mil-

INFANTRY DRILL.

ARTILLERY DRILL.

STUDENTS IN DRILL HALL.

itary duties which will fall upon them in time of national trouble, and to fit them to take positions as officers in the national guard and volunteers. The course consists of both practical and theoretical instruction in the duties of a soldier.

In the practical course, which consists largely of drill, both as infantry and artillery, particular attention is devoted to the physical development of the students. No effort is spared to instill into the cadets a sense of the importance of the work undertaken, and while giving them that quickness and readiness to obey which is so necessary to a soldier, to insure a proper and healthful carriage of the body. All male students in good health are required to take this course, for which purpose they are organized into a battalion of two companies of infantry, from which four batteries of artillery are selected and two classes in military signalling.

The cadets have been uniformed at a very moderate expense, in a neat and handsome uniform of fine blue cloth, consisting of a blouse and trousers cut after the pattern worn by the U. S. naval cadets, with forage caps holding the coat of arms of the State of Rhode Island. This uniform is not only handsome and economical, but with moderate care will last a long time.

The facilities for the military course are excellent. The land about the college is of such a character as to permit of the illustration of many of the minor operations of war. The campus affords an unusually good drill ground; and for indoor drill, during inclement weather, the college has one of the largest drill halls, if not the largest, of any institution of learning in the country.

#### *PHYSICAL TRAINING.*

The young women have opportunity to exercise in the gymnasium at least three times a week. Once a week all the young women meet for gymnasium work, which is conducted by Miss Helen E. Brooks of the Boston Normal School of Gymnastics. Other classes under the same direction are arranged for further work in this subject. All the young women are required to take gymnasium work, unless physically disabled.

## COURSES OF INSTRUCTION.

---

The following courses of instruction are offered in the different departments. All studies required of regular students lead to the degree of Bachelor of Science.

### CHEMISTRY.

I. General Chemistry, Briefer Course.—Non-metals. Recitations, lectures and laboratory work. *Spring term, Sophomore year; recitations and lectures, 3 exercises per week; laboratory work, 1 exercise of 2 hours per week. Required of all candidates for a degree.*

II. General Chemistry.—Metals. Lectures and laboratory work. *Fall term, Junior year; 3 exercises per week. Required of all candidates for a degree.*

III. Qualitative Analysis.—Laboratory work. *Fall term, Junior year; 2 exercises of 2 hours each per week; Winter term, 2 exercises of 3 hours each per week. Required of all candidates for a degree.*

IV. Organic Chemistry.—Lectures, recitations and laboratory work. *Winter term, Junior year; 4 exercises per week. Required of Agricultural students.*

V. Organic Chemistry.—Lectures and laboratory work. *3 exercises per week. Elective; open to students who have taken course IV.*

LIPPITT HALL.

VI. Agricultural Chemistry.—Lectures and laboratory work. *Spring term, Junior year ; 3 exercises per week. Laboratory work. Fall term, Senior year ; 2 exercises of 3 hours each per week. Required of Agricultural students.*

VII. Quantitative Analysis.—Laboratory work. *Spring term, Junior year ; 2 exercises of 3 hours each per week. Required of Agricultural students.*

VIII. Courses in Theoretical or Sanitary Chemistry or Quantitative Analysis.—Laboratory work. *Throughout the Senior year ; 2 exercises of 3 hours each per week. Elective ; open to students who have taken courses I and II.*

IX. Dyeing of Textile Fabrics.—*Winter and spring terms, Senior year ; three exercises per week. Elective ; open to students who have taken courses IV and VII.*

### PHYSICS.

I. General Course.—Study of sound and heat, *Fall term ; electricity and magnetism, Winter term ; light, mechanics, hydraulics, and pneumatics, Spring term, Freshman year ; recitations, 3 exercises per week ; laboratory work, 1 exercise per week. Required of all candidates for a degree.*

II. Advanced Physics.—*Throughout the year ; recitations, 1 exercise per week ; laboratory work, 2 exercises per week. Elective ; open to students who have taken course I.*

III. Advanced Electrical Work.—A course of lectures upon electrical measurements, testing of instruments, dynamos and motors. *Throughout the year. Lectures, 2 exercises per week ; laboratory work, 1 exercise per week. Elective ; open to students who have taken course II.*

IV. Applied Electricity.—A course of lectures upon the modern

practical applications of electricity. *Throughout the year; lectures, 2 exercises per week; laboratory work, 1 exercise per week. Elective; open to students who have taken course III.*

V. Elementary Photography.—A course of lectures and recitations upon the optics and chemistry of photography, together with practical photographic work. *Spring term; lectures, 2 exercises per week; laboratory work, 2 exercises per week. Elective; open to all students.*

VI. Advanced Photography.—A course of lectures on photomicrography, the making of lantern slides and bromide enlargements, and the manipulation of the optical lantern. *Spring term; lectures, 2 exercises per week; laboratory work, 2 exercises per week. Elective; open to students who have taken course V.*

#### PHYSIOGRAPHY.

Tarr's Physical Geography, with required reading from reference books. Laboratory work and excursions. *Fall term, Freshman year; 4 exercises per week. Required of all candidates for a degree.*

#### GEOLOGY.

Agricultural Geology.—Lectures and recitations. *Winter term of Senior year; 2 exercises per week. Required of Agricultural students, elective for Mechanical students.*

#### BOTANY.

I. Biology of Plants.—The general principles of biology are illustrated by our common plants. Laboratory, reading and lectures. *Winter and Spring terms, Freshman year, and Fall term, Sophomore year; 3 exercises of 2 hours each per week. Required of students in the Agricultural, Biological and Chemical courses.*

II. Fungi.—A study of fungi with special reference to para-

sitic forms of economic importance. Laboratory, reading and lectures. *Elective ; open to students who have taken course I. Hours arranged with instructor.*

III. Histology.—Laboratory, reading and lectures. The laboratory work includes methods of imbedding, sectioning, staining, and mounting. *Elective ; open to students who have taken course I. Hours arranged with instructor.*

IV. A study of the Spring Flora of Kingston, with practice in the identification of species. Field and laboratory, *Spring term ; 1 exercise per week. Elective ; open to students who have taken course I.*

By consulting the instructor other arrangements may sometimes be made for those desiring to elect work in botany.

## ZOÖLOGY.

I. Biology of Animals.—Instruction in animal biology embraces a careful treatment, through the laboratory, lecture and text-book, of the general anatomical, physiological and developmental phenomena of animal life ; the conditions and the causes of the broad manifestations of life, in the cell, in the individual, and in the race. The types studied are : Amœba, Paramœcium, Vorticella, Hydra, earthworm, fish, frog, cat and man. Among the questions dealt with are the meaning of such terms as protoplasm, nutrition, growth, reproduction, life, death, the physiological division of labor, heredity, the views held by the different schools of evolutionists, the variation of species, effect of environment, natural selection, parasitism, and geographical distribution. In brief, it is a course adapted for the general student who wishes a knowledge sufficient to comprehend and to profit by the important current discussions bearing upon man's relations to his environment ; at the same time, it gives a broad foundation for one who plans to enter a career in biological science, either as a teacher, investigator, or medical practitioner. *Winter and Spring terms, Sophomore year ; 3 exercises per week. Required of Agricultural students.*

II. Zoölogy of the Farm Animals.—A study of the anatomy and physiology, comparative anatomy, embryology and phylogeny of the horse, cow, sheep and pig. (Including reference to parasites and diseases.) *Fall term, Junior year ; 3 exercises per week. Required of Agricultural students.*

III. Zoölogy of Farm Animals.—(a) Zoölogy of the domestic fowls. *Winter term, Junior year ; 6 weeks (one-half term), 3 exercises per week.* (b) The principles and practice of aquiculture, (applied zoölogy). With special reference to utilization of ponds, ditches, coast, and waste places on the farm, for growing crops of food animals. *6 weeks (one-half term) ; 3 exercises per week.*

IV. Entomology. *Fall term, Junior or Senior year ; 3 exercises per week.*

V. Comparative Animal Physiology.—(Including histology; for advanced students only. Prerequisites, organic chemistry, and all previous courses in zoölogy). *Senior year ; 3 exercises per week.*

VI. The Spring Fauna of Kingston, as complementary to the course on the Spring Flora. *Spring term, 1 exercise per week. Elective.*

For additional courses in comparative normal histology, in comparative anatomy of the vertebrated animals, in comparative embryology, and in the phylogeny of animals, special arrangements may be made with the instructor.

#### PSYCHOLOGY.

Elementary Course.—Lectures, recitations, simple laboratory experiments. *Winter and Spring terms ; 3 exercises per week. Elective for Juniors and Seniors.*

## AGRICULTURE.

I. Introduction.—Definition of terms; origin and necessity of agriculture; relations of agriculture to other industries; agriculture as an occupation; education for agriculture; the atmosphere and sunshine in relation to agriculture; plant and animal life in agriculture. *Spring term, Freshman year; 2 exercises per week. Required of Agricultural students.*

II. Soils.—*The origin, formation, and deposition of soils are studied under physiography; the composition, mechanical and chemical analysis under agricultural chemistry; the physical properties and relations under soil-physics.* Agricultural Soils.—Definition; function; variation; classification; adaptation; location; examination; faults; improvement and preparation; clearing land; grading; mixing soils; paring and burning; reclaiming land; irrigation. *Fall term, Sophomore year; 2 exercises per week for one-half term. Required of Agricultural students.*

III. Land Drainage (Waring).—Sources of water; necessity of drainage; kinds of drains; action of drains; planning system of drainage; drain tiles; construction and care of drains; cost and value of drains; sanitary effects of drainage. *Fall term, Sophomore year; 2 exercises per week for one-half term. Required of Agricultural students.*

IV. Agricultural Apparatus and Constructions.—Farm tools; implements; machines and vehicles; farm buildings; fences; roads and bridges—arrangement, construction, care and maintenance. *Winter term, Sophomore year; 3 exercises per week. Required of Agricultural students.*

V. Farm Fertilization.—Introduction; classification of manures, atmospheric, mineral and organic; manurial sources of potash, lime, magnesia, soda, iron, phosphates and nitrogen salts; stable manure, composition and management; animal manures; liquid manure; farm sewage; guanos; fish fertilizers; animal

refuse; peat; green manuring; sea-weeds; vegetable refuse and by-products; composts; divisors for manures; application and action of manures; valuation of manures. *Spring term, Sophomore year; 2 exercises per week. Required of Agricultural students.*

VI. Field Crops.—Balancing of farm; rotation of crops; grass-land; wood-land; tillage-land; preparation of land, planting, cultivating, harvesting, storing and disposal of crops; special consideration of the hay crop, fodder crops, Indian corn, potatoes, root crops, field and garden vegetables; weeds. *Fall term, Junior year; 2 exercises per week. Elective.*

VII. Breeds of Farm Animals (Curtis).—Origin, history, characteristics and adaptability of the leading breeds of the horse, neat cattle, sheep, swine, and poultry; scoring; tracing pedigrees; breeders' associations. *Fall term, Senior year; 2 exercises per week. Elective.*

VIII. Breeding of Live Stock.—The principles of breeding; heredity; atavism; correlation; variation; fecundity; in-breeding; cross-breeding; relative influence of parents; sex; pedigree; form; selection; the breeding, care and management of the horse, neat cattle, sheep, swine, and poultry. *Fall term, Senior year; 3 exercises per week. Elective.*

IX. History of Agriculture.—Agriculture in relation to civilization; fisher and hunter-folk; nomads; tillers of the soil; development of tillage; history of the plow; crop rotation; irrigation; fertilization; general and special farming; agricultural education; agricultural experimentation; evolution of farming implements; the farm and the farmer to-day. *Fall term, Senior year; 2 exercises per week. Elective by special arrangement.*

X. Feeding of Farm Animals.—Principles of rational feeding; animal body, composition, processes of digestion, assimilation, and excrementation; feeding stuffs, composition and digestibility; nutrients; feeding standards; formulating rations; selection of

feeding stuffs ; preparation of food ; methods of feeding ; utility of shelter ; special feeding of horse, cow, sheep, swine, and poultry. *Winter term, Senior year ; 3 exercises per week. Elective.*

XI. Dairy Husbandry.—Breeds and breeding of dairy cattle ; barns and dairy buildings ; milk production, composition ; management, aeration, pasteurization, sterilization, testing, transportation, and marketing ; creaming ; butter-making ; cheese-making ; milk-preservation, condensed milk, milk-sugar, etc., milk-preparation for infants and invalids ; dairy bacteriology. *Winter term, Senior year ; 3 exercises per week. Elective.*

XII. Poultry Raising.—Domestic fowls—kinds, breeds, selection, and breeding ; buildings—location and arrangement, construction and furnishing, ventilation, yards and parks ; foods and feeding, care and management, production of eggs and flesh, fattening ; dressing and marketing ; incubation, natural and artificial ; rearing ; diseases and enemies ; caponizing ; records and accounts ; special management of turkeys, geese, ducks, and pigeons. *Winter term, Senior year ; 2 exercises per week. Elective.*

XIII. Agricultural Economics.—The mutual relations of agriculture and the body politic ; the position of agriculture ; independence of agriculture ; State intervention ; legislation ; tariff ; bounties ; taxation ; insurance ; credit ; rewards ; census ; moral and social aspects of agriculture ; division and distribution of farms ; size of farms ; extensive and intensive farming ; ownership of land ; inheritance ; nationalization of land ; government lands ; colonization ; agricultural laborers, machinery, experimentation ; education ; association ; coöperation ; press ; agricultural improvement ; reclamation and irrigation of land ; diversification of products. *Winter term, Senior year ; 2 exercises per week. Elective by special arrangement for students who have taken Agriculture IX.*

XIV. Agricultural Literature.—An opportunity to read and study in any special line of agriculture for which the student is prepared. Examination and consideration of the reports and

bulletins of the agricultural experiment stations. *Winter term, Senior year; 2 exercises per week. Elective by special arrangement.*

XV. Farm Management.—Introduction and definitions; farming requisites; farm production and market relations; capital—permanent, floating and perishable—distribution in land, buildings, apparatus, live stock, and supplies; labor and power; machinery; kind of farming; size of farm; system of farming; ownership or rental of farm; maintenance and management; returns and results; inventory, and balancing of accounts. *Spring term, Senior year; 5 exercises per week. Elective.*

XVI. Farm Accounts and Records.—The principles and methods of book-keeping in their application to the keeping of farm accounts; diary; note-book; calendar; records and accounts of special departments, crops, fields, and animals; calculations; estimates, and valuations; inventories. *Spring term, Senior year; 1 exercise per week. Elective.*

XVII. Farm Law.—The legal rights and liabilities of farmers; purchase and sale of farm, forms of deeds; rental of farm, terms of lease; boundaries and fences; overhanging trees; water rights and drainage; ways over the farm; rights in the highway; road-sides; live stock; dogs; game; trespass; theft; fires; insurance; employing laborers; liability of employer and employed; contracts; mortgages; notes; taxes; exchange, sale, and purchase; contagious diseases of live stock and crops. *Spring term, Senior year; 1 exercise per week. Elective by special arrangement.*

XVIII. Apiculture.—A study of the habits, care, breeding, and management of the honey-bee, with practical work in the apiary. *Spring term, Senior year; 1 exercise per week. Elective by special arrangement.*

XIX. Agricultural Debate.—Discussion in the form of regular parliamentary debates upon leading agricultural questions. *Spring term, Senior year; 1 exercise per week. Elective.*

XX. Agricultural Experimentation.—A study of the objects,

principles, and methods of agricultural experimentation. Opportunity will be given for practical participation in the work of the Experiment Station to those students who arrange to continue this work through the experimental season. *Spring term, Senior year ; 2 exercises per week. Elective by special arrangement.*

### HORTICULTURE.

I. Principles of Horticulture.—A discussion of fundamental principles underlying horticultural operations in orchard, garden, and greenhouse. *Fall term ; 3 recitations and 1 laboratory period per week. Required of Agricultural students.*

II. Pomology.—Lectures and supplementary reading. Designed to give practical instruction in fruit growing. *Winter term ; 3 exercises per week. Elective.*

III. Vegetable Gardening.—Methods of growing garden vegetables in the open ground and under glass. *Winter term ; 3 exercises per week. Elective.*

IV. Landscape Gardening.—The principles underlying landscape gardening as a fine art, with discussion of the ornamentation of home-grounds, school-grounds, cemeteries, parks, highways, and other public grounds. Lectures and supplementary reading. *Fall term ; 3 exercises per week. Elective.*

V. Forestry.—General importance of forests, their influence on climate and water supply, methods of regeneration, and systems of forest management. Lectures and supplementary reading. *Winter term ; 2 exercises per week. Elective.*

VI. Plant Breeding.—A discussion of the development of plants under culture, with especial reference to problems of heredity, environment, variation, selection, and evolution. Lectures and supplementary reading. Open to students who have had course I in botany. *Fall term ; 2 exercises per week. Elective.*

VII. Horticultural Literature.—A seminary course designed to

give familiarity with horticultural writings, ancient and modern.  
*By arrangement. Elective.*

VIII. Original Investigation.—For advanced students only.  
*By arrangement. Elective.*

#### ENGLISH.

I. Elementary Course.—Grammar; composition; study of college preparatory English. *Fall term of first year; 6 exercises per week; Winter and Spring terms, 5 exercises per week; throughout the second year, 3 exercises per week. Required of all students in the Preparatory department.*

II. Rhetoric.—Text-book study and practical application of rhetorical principles in theme work and illustrative readings. *Two exercises per week throughout the Freshman year. Required of all candidates for a degree.*

III. Critical study of certain prose masterpieces, with essays and various short papers.—*Two exercises per week throughout the Sophomore year. Required of all candidates for a degree.*

IV. General English Literature.—Topical study. Essays and collateral reading required. *Four exercises per week; Winter and Spring terms, Junior year. Required of all candidates for a degree. After 1900 this course will be given in two exercises per week throughout the Junior year, and will be required of all candidates for a degree.*

V. Special English Literature.—Study of special periods and authors. *Three exercises per week throughout the year. Elective; open to students who have taken courses I-IV or their equivalent.*

VI. Historical English.—*Two exercises per week throughout the year. Elective; open to students who have taken courses I-V or their equivalent.*

VII. Argumentation.—*Two exercises per week; Fall term. Elective; open to students who have taken courses I-IV or their equivalent.*

VIII. Special Work in Themes.—*Throughout the year. Elective ; open to students who have taken courses I-IV or their equivalent.*

#### GERMAN.

I. Elementary Course.—Grammar, dictation, conversation, reading of easy prose and poetry. *Throughout the Freshman year ; 5 exercises per week. Required of all candidates for a degree who do not offer French. In 1899 this course will be required of all Juniors.*

II. Reading of intermediate texts, composition, conversation. *Fall term, Sophomore year ; 3 exercises per week. Open to students who have taken course I or its equivalent, and required of all candidates for a degree who do not offer French.*

III. German Classics.—*Winter and Spring terms ; 3 exercises per week. Open to students who have taken courses I and II or their equivalent, and required of all candidates for a degree who do not offer French.*

IV. Scientific German.—*Winter and Spring terms ; 2 exercises per week. Elective ; open to students who have taken course I or its equivalent.*

V. Sight-Reading.—*Throughout the year ; 1 exercise per week. Elective ; open to students who have taken courses I-III or their equivalent.*

VI. Goethe's Meisterwerke (Bernhardt).—*Fall term ; 3 exercises per week. Elective ; open to those who have taken courses I-III or their equivalent.*

VII. Study of Schiller or Heine.—*Winter term ; 3 exercises per week. Elective ; open to those who have taken courses I-III or their equivalent.*

VIII. Study of Freytag.—*Summer term ; 3 exercises per week. Elective ; open to those who have taken courses I-III or their equivalent.*

**FRENCH.**

I. Elementary Course.—Grammar, dictation, conversation, reading of easy prose and poetry. *Throughout the year ; 5 exercises per week. Required of all Freshmen not electing German and not offering French for admission.*

II. Reading of intermediate texts, composition, conversation.—*Throughout the Sophomore year ; 3 exercises per week. Required of all candidates for a degree who do not offer German.*

III. Scientific French.—*Spring term, Sophomore year ; 2 exercises per week. Elective ; open to students who have taken course I or its equivalent.*

IV. French Classics.—*Throughout the year ; 3 exercises per week. Elective ; open to students who have taken courses I-III.*

V. Sight-Reading.—*Throughout the year ; 1 exercise per week. Elective ; open to students who have taken courses I-III.*

VI. Lyrics of the Nineteenth Century.—*Two exercises per week. Fall term. Elective ; open to those who have taken courses I-III or their equivalent.*

VII. Study of Victor Hugo.—*Winter term, 2 exercises per week. Elective ; open to those who have taken courses I-III or their equivalent.*

**LATIN.**

I. Elementary Course.—Grammar, composition, easy reading. *Throughout the year ; 5 exercises per week. Required of students in the Preparatory department.*

II. Selections from various Latin authors, or Caesar.—*Throughout the year ; 3 exercises per week. Elective.*

**EXPRESSION.**

I. Elementary Work in Reading.—Elements of speech, articulation, and sight-reading. *Throughout the Preparatory year ; 1 exercise per week. Required.*

II. Reading.—The cultivation of ease and naturalness. Study of narrative poetry and prose. *Throughout the Freshman year ; 1 exercise per week.*

III. Reading and Recitations.—Study of various forms of poetry and prose. *Throughout the Sophomore year ; 1 exercise per week. Elective.*

IV. Study of the Drama.—Critical reading of some standard play, with the memorizing and acting of scenes. Extemporaneous speaking required. *Throughout the Junior year ; 1 exercise per week. Elective.*

V. Study of Shakespeare.—Two extemporaneous speeches and one oration required each term. One debate during the year. *Throughout the Senior year : 1 exercise per week. Elective.*

VI. Advanced Elective.—*Throughout the year ; 3 exercises per week. Open to those who have taken courses I and II.*

**HISTORY AND POLITICAL SCIENCE.**

I. Constitutional and Political History of the United States. Based on "Epochs of American History."—Lectures, recitations, readings, and reports. *Fall and Winter terms ; 3 exercises per week. Elective for Juniors and Seniors.*

II. Science of Government.—Town, city, country, state, and United States. Their origin, development, and practices. Critical analysis of the Constitution of the United States. Lectures, recitations, and reports. *Fall term ; 3 exercises per week. Required of all candidates for a degree.*

III. Political Economy.—General principles. Based on Walker's Advanced Course.—Lectures, recitations, discussions, readings, essays. Consideration of present day problems. *Winter and Spring terms, Senior year ; 3 exercises per week. Required of all candidates for a degree.*

#### MATHEMATICS.

I. Algebra (Wells).—The fundamental operations, addition, subtraction, multiplication, division, of algebraic quantities; factoring and its applications; the solution of simple equations with one or more unknown quantities; involution; evolution; the theory of exponents; the solution of radical and quadratic equations; arithmetical and geometrical progression; the binomial theorem. *Preparatory department ; 4 exercises per week throughout five terms.*

II. Plane Geometry (Wells).—Rectilinear figures; the circle; measurements of angles; the theory of proportion; similar figures; regular polygons; areas of polygons; the measurement of the circle; original demonstrations. *Preparatory department ; second year ; 4 exercises per week.*

III. College Algebra (Taylor).—The theory of limits; differentiation; development of functions in series; permutations and combinations; probability. *Fall term, Freshman year ; 4 exercises per week. Required of all candidates for a degree. Elective for classes from 1899–1901, inclusive.*

IV. Plane Trigonometry (Locke-Miller).—The derivation of the fundamental formulas; logarithms; the solution of right and oblique triangles; practical problems. *Winter term, Freshman year ; 3 exercises per week. Required of all candidates for a degree.*

V. Solid Geometry (Wells).—Lines and planes in space; dihedral angles; polyhedral angles; polyhedrons; the cylinder, cone and sphere; measurement of the cylinder, cone, and sphere; nu-

merical examples and original demonstrations. *Spring term, Freshman year ; 3 exercises per week. Required of all candidates for a degree.*

VI. Analytical Geometry (Loney).—Coördinate systems; the point; the line; relation between different coördinate systems; the equation of the first degree, the straight line; the equation of the second degree, the conic sections; higher plane curves. *Fall and Winter terms, Junior year ; 4 exercises per week. Required of students in the Mechanical, Physical, and Mathematical courses.*

VII. Calculus (Osborne).—The differentiation of algebraic, trigonometric, logarithmic, exponential, and anti-trigonometric functions. Integration of fundamental forms; definite integrals; applications to geometry and mechanics; successive differentiation; successive integration with applications; evaluation of indeterminate forms; the development of functions in series; maxima and minima; change of the independent variable; integration of rational fractions; integration by rationalization; integration by parts and by series; curve tracing. *Winter and Spring terms, Junior year ; and Fall term, Senior year ; 3 exercises per week. Required of students in the Mechanical, Physical, and Mathematical courses.*

VIII. Curve Tracing.—Lecture course. The construction and elementary properties of simple plane curves; symmetry; diameters; limits; asymptotes. *Fall term ; 1 exercise per week. Elective ; open to students who have completed courses III and IV.*

IX. Synthetic Geometry (Dupuis).—The point, line, and circle; comparison and measurement of areas; proportion amongst line segments; collinearity; inversion; anharmonic division; homography. *Winter term ; 3 exercises per week. Elective ; open to students who have completed courses III and IV.*

X. Spherical and Higher Plane Trigonometry (Chauvenet).—The derivation and application of the fundamental formulas; trigonometric series; the construction of trigonometric tables. *Spring*

*term ; 3 exercises per week. Elective ; open to students who have completed courses III, IV, and V.*

XI. Solid Analytical Geometry (Smith).—Theorems on the plane and the surfaces of the second degree. *Winter term ; 3 exercises per week. Open to students who have completed course VI*

XII. Advanced Calculus (Byerly).—An extension of course VII, including a further discussion of definite integrals ; imaginaries, length of curves, areas, volumes, and the elements of elliptic integrals. *Spring term ; 3 exercises per week. Elective ; open to students who have completed course VII.*

XIII. Analytical Mechanics.—*Fall term ; 3 exercises per week. Elective ; open to students who have completed course VII.*

XIV. Courses in projective geometry, modern analytical geometry, differential equations, theory of equations, theory of functions, will be arranged as demand for them arises.

#### ASTRONOMY.

I. Physical Astronomy.—Lecture course, illustrated with copious lantern slides, observations with a four-inch telescope, and laboratory work with the sun spectrum and the spark spectrum, sufficient to give an insight into modern methods of astronomical work. *Spring term ; 3 exercises per week. Elective ; open to students who have completed Mathematics III, IV, and V.*

II. Practical Astronomy.—The use of instruments ; the determination of time, of latitude, of longitude. *Spring term ; 3 exercises per week. Elective ; open to students who have completed Mathematics VII and X.*

#### CIVIL ENGINEERING.

I. Plane Surveying (Carhart).—Elementary course, field work, recitation, and plotting. Use of compass, transit, and levels ; adjustment of instruments ; stadia surveying. *Fall term, Sophomore*

year ; 1 exercise per week of classroom work, 2 exercises of three hours each of field work per week. Required of Agricultural students.

II. Civil Engineering.—Land, topographic and railroad surveying, the study of the use of engineer's tables. *Spring term ; 4 exercises per week. Required of Agricultural students.*

III. Road Construction and Leveling (Spalding).—Location and construction of roads ; mechanical structures ; earth, gravel, broken stone, paved and macadam roads. *Fall term, Junior year ; 3 exercises of text-book work and 1 exercise of three hours of field work per week.*

#### MECHANICS.

I. Strength of Materials (Merriman).—Strength of wood, steel, alloys, stone, brick, and cements. *Spring term, Junior year ; recitations, 3 exercises per week ; laboratory work, 1 exercise of 2 hours per week. Required of Mechanical students.*

II. Mechanism.—Rectilinear motion ; rotary motion ; transmission of motion. Lectures. *Spring term, Junior year ; 2 exercises per week. Required of Mechanical students.*

III. Mechanics of Engineering (Church).—Bodies in equilibrium and in motion ; work and power ; friction of rest and motion ; strength of simple beams, continuous beams, pipes and columns, arches. Recitations. *Fall term, Senior year ; 5 exercises per week ; Winter term, Senior year ; 4 exercises per week. Graphic statics, hydraulics, and water-wheels. Spring term, Senior year ; 5 exercises per week. Required of Mechanical students.*

IV. Steam Engineering (Kinealy).—Study of steam and its properties ; simple and compound engines ; steam boilers. *Fall term, Senior year ; 3 exercises per week. Elective.*

V. Metallurgy (Huntington).—Study of the manufacture of cast iron, wrought iron, and steel ; rolling-mill machinery ; metal-

lurgy of copper, tin, zinc, and silver ; alloys. *Winter term, Senior year ; 3 exercises per week. Elective.*

VI. Mechanical Drawing.—*Winter term, Sophomore year ; 1 exercise of 2 hours per week. Elective.*

VII. Mechanical Drawing.—*Spring term, Freshman year ; 1 exercise of 2 hours per week. Required of Agricultural students.*

VIII. Mechanical Drawing (Anthony).—*Throughout the Sophomore year ; 2 exercises of 2 hours each per week. Required of Mechanical students.*

IX. Mechanical Drawing.—*Throughout the Junior year ; 2 exercises of 2 hours per week. Required of Mechanical students.*

X. Mechanical Drawing.—Machine drawing and design. *Full and Winter terms, Senior year ; 1 exercise of 3 hours per week. Required of Mechanical students.*

XI. Mechanical Drawing.—*Winter term, Freshman year ; 1 exercise of 2 hours per week. Spring term, Freshman year ; 2 exercises of 2 hours per week. Required of Mechanical students.*

XII. Descriptive Geometry (Faunce).—Notation and elementary principles ; problems on the point, line, and plane ; problems relating to the cylinder, cone, and double curved surface of revolution ; intersection and development of planes and solids ; practical problems. *Fall term, Junior year ; 3 exercises per week. Required of Mechanical students.*

XIII. Wood-working.—Use of tools, bench work, and carpentering. *Winter term, Freshman year ; 2 exercises of 3 hours each per week. Required of all Agricultural students.*

XIV. Wood-working.—*Winter term, Freshman year ; 2 exercises of 3 hours each and 1 exercise of 2 hours per week. Required of Mechanical students.*

XV. Wood-turning.—Shop-work. *Fall term, Sophomore year ;*

*2 exercises of 3 hours each per week. Required of Mechanical students.*

XVI. Pattern-making.—Principles of moulding and casting. Shop-work. *Spring term, Sophomore year ; 1 exercise of 3 hours per week. Required of Mechanical students.*

XVII. Wood-turning and Pattern-making. — *Spring term, Freshman year ; 2 exercises of 3 hours each and 1 exercise of 2 hours per week. Required of Mechanical students.*

XVIII. Forging.—Shop-work. *Fall term, Sophomore year ; 1 exercise of 3 hours per week. Required of Agricultural students.*

XIX. Iron-work.—Forging, drawing, bending, welding, and tool-dressing. Shop-work. *Winter term, Sophomore year ; 2 exercises of 3 hours each per week. Required of Mechanical students.*

XX. Constructions, and Estimates of Cost.—Shop-work and lectures. *Winter term, Sophomore year ; 2 exercises of 2 hours each per week. Required of Agricultural students.*

XXI. Wood-carving.—Care and use of tools, geometrical motives, diaper patterns, incised carving, flat and curved surface carving, historic ornament, low relief, and high relief. *Elective throughout the course ; 1 exercise of 3 hours per week.*

XXII. Machine-shop Practice.—*Fall term, Junior year ; 2 exercises of 3 hours per week. Required of Mechanical students.*

XXIII. Machine-shop Practice.—*Winter and Spring terms, Junior year ; 1 exercise of 3 hours per week. Required of Mechanical students.*

XXIV. Machine Construction.—Shop-work. *Throughout the Senior year ; 2 exercises of 3 hours each per week. Required of Mechanical students.*

XXV. Engineering Conferences.—Subjects chosen by the class. *Spring term, Senior year ; 2 exercises per week. Required of Mechanical students.*

*DRAWING AND MODELING.*

I. Freehand Drawing.—Drawing from objects. Memory sketches required. *Fall term, Freshman year; 1 exercise of 2 hours per week. Required of all candidates for a degree.*

II. Drawing in Charcoal from Still Life and the Cast.—*Fall and Spring terms, Sophomore year; 1 exercise of 2 hours per week. Elective; open to students who have taken course I.*

III. Drawing from Life or the Cast, and Painting in Oil, Pastel, or Water Color.—*Fall and Spring terms, Junior and Senior years; 2 exercises of 2 hours each per week. Elective; open to students who have taken courses I and II.*

IV. Sketch Class.—Rapid sketching from life. *One exercise of 1 hour per week. Elective throughout the course. In the Junior and Senior years 2 exercises per week may be taken.*

V. Modeling from Objects and Casts.—*Fall term, Junior and Senior years. Elective; open to all courses.*

VI. History of Art.—Reading and lectures. *Spring term, Junior and Senior years; 1 exercise of 1 hour per week. Elective; open to all courses.*

# THE PREPARATORY DEPARTMENT

OF THE

## *R. I. College of Agriculture and Mechanic Arts.*

Students in the Preparatory Department are placed in one of the following classes, according to their attainments.

*The object of this course is to prepare students from the country schools for the college courses in Agriculture and Mechanic Arts.*

### FALL TERM.

<i>First Year Preparatory.</i>	<i>Second Year Preparatory.</i>
Advanced Arithmetic..... 5	Algebra..... 4
English..... 6	Geometry..... 3
General History..... 3	English..... 3
Physiography..... 2	Latin..... 5

### WINTER TERM.

Algebra..... 5	Algebra..... 4
English..... 5	Geometry..... 3
General History..... 3	English..... 3
Physics..... 3	Latin..... 5

### SPRING TERM.

Algebra..... 5	Algebra..... 4
English..... 5	Geometry..... 3
General History..... 3	English..... 3
Physics..... 3	Latin..... 5

Students able to take afternoon work may elect one of the following subjects : carpentering, freehand drawing, wood-carving, or practical agriculture.

Also students desiring special work in Agriculture or Mechanics, who are not prepared to enter the regular courses leading to a degree, may combine with work in the preparatory department such courses in Agriculture and Mechanics as may fit their especial needs. The successful completion of such a special course will lead to a certificate covering the work completed.

## *The Courses of Study Leading to a Degree.*

### *FRESHMAN.*

#### FALL TERM.

Physiography.....	4
Elementary Physics.....	4
College Algebra.....	4
Rhetoric.....	2
French or German.....	5
Freehand Drawing.....	1

#### WINTER TERM.

<i>Agricultural Course.</i>	<i>Mechanical Engineering, and Physical and Mathematical Courses.</i>	<i>Chemical, Biological, and Preparatory Medical Courses.</i>
Elementary Physics..... 3	Elementary Physics..... 3	Elementary Physics..... 3
Plane Trigonometry..... 3	Plane Trigonometry..... 3	Plane Trigonometry..... 3
Rhetoric..... 2	Rhetoric..... 2	Rhetoric..... 2
French or German..... 5	French or German..... 5	French or German..... 5
Biology of Plants..... 3	Mechanical Drawing..... 1	Biology of Plants..... 3
Agricultural Mechanics..... 2	Wood-working..... 3	*Elective..... 3

#### SPRING TERM.

Elementary Physics..... 3	Elementary Physics..... 3	Elementary Physics..... 3
Solid Geometry..... 3	Solid Geometry..... 3	Solid Geometry..... 3
Rhetoric..... 2	Rhetoric..... 2	Rhetoric..... 2
French or German..... 3	French or German..... 3	French or German..... 3
Biology of Plants..... 3	Mechanical Drawing..... 2	Biology of Plants..... 3
Agriculture, I: introduction to Agriculture..... 2	Wood-turning and Pattern- making..... 3	*Elective..... 3
Mechanical Drawing..... 1		

\* A list of electives will be announced at the close of each year.

*SOPHOMORE.*

## FALL TERM.

<i>Agricultural Course.</i>	<i>Mechanical Course.</i>
Chemistry..... 4	Chemistry..... 4
Advanced English..... 2	Advanced English..... 2
German or French ..... 3	German or French ..... 3
Plane Surveying..... 3	Analytical Geometry..... 4
Botany: weeds and fodder plants..... 3	Mechanical Drawing..... 2
Agriculture, II and III; soils and drainage. 2	Moulding..... 2

## WINTER TERM.

Chemistry..... 6	Chemistry..... 6
Advanced English..... 2	Advanced English..... 2
German or French ..... 3	German or French ..... 3
Animal Biology..... 3	Analytical Geometry..... 4
Agriculture, IV: apparatus and constructions..... 3	Mechanical Drawing..... 1
Forging..... 1	Forging..... 2

## SPRING TERM.

Chemistry..... 3	Chemistry..... 3
Advanced English..... 2	Advanced English..... 2
German or French ..... 3	German or French ..... 3
Animal Biology..... 3	Descriptive Geometry..... 3
Agriculture, V: fertilization..... 2	Mechanical Drawing..... 2
Surveying: topographical ..... 4	Applied Electricity..... 3
	Surveying: leveling and topographical..... 2

## FALL TERM.

<i>Physical and Mathematical Courses.</i>	<i>Chemical, Biological, and Preparatory Medical Courses.</i>
Chemistry..... 4	Chemistry..... 4
Advanced English..... 2	Advanced English..... 2
German or French ..... 3	German or French ..... 2
Analytical Geometry..... 4	Biology of Plants..... 3
Advanced Physics: thermometry, thermodynamics, sound and telephony ..... 3	*Elective ..... 6

\* A list of electives will be announced at the close of each year.

*SOPHOMORE.—Continued.*

WINTER TERM.

<i>Physical and Mathematical Courses.</i>	<i>Chemical, Biological, and Preparatory Medical Courses.</i>
Chemistry..... 6	Chemistry..... 6
Advanced English..... 2	Advanced English..... 2
German or French..... 3	German or French..... 3
Analytical Geometry..... 4	Animal Biology..... 3
Advanced Physics: optical phenomena and instruments..... 3	*Elective..... 3

SPRING TERM.

Chemistry..... 3	Chemistry..... 3
Advanced English..... 2	Advanced English..... 2
German or French..... 3	German or French..... 3
Descriptive Geometry..... 3	Animal Biology..... 3
Advanced Physics: electricity and magnetism..... 3	Theoretical Chemistry..... 3
Theoretical Chemistry..... 3	Inorganic Preparations..... 3

*JUNIOR.*

FALL TERM.

<i>Agricultural Course.</i>	<i>Mechanical Course.</i>
Organic Chemistry..... 3	General English Literature and History.... 2
General English Literature and History... 2	Analytical Chemistry..... 2
Analytical Chemistry..... 3	Calculus..... 4
Zoölogy of Farm Animals..... 3	Mechanical Drawing..... 2
Horticulture..... 3	Machine Shop..... 3
Economic Entomology..... 3	*Elective..... 4

WINTER TERM.

General English Literature and History... 2	General English Literature and History.... 2
Agricultural Chemistry..... 3	Calculus..... 4
*Elective..... 12	Machine Design..... 2
	Machine Shop..... 3
	Thermo-dynamics and Steam-engine..... 3
	*Elective..... 3

\* A list of electives will be announced at the close of each year.

*JUNIOR.—Continued.*

## SPRING TERM.

<i>Agricultural Course.</i>	<i>Mechanical Course.</i>
General English Literature and History.... 2	General English Literature and History.... 2
Agricultural Chemistry..... 3	Machine Design..... 2
*Elective.....12	Machine Shop..... 3
	Engineering Laboratory ..... 1
	Steam Boilers..... 2
	*Elective..... 3

## FALL TERM.

<i>Physical and Mathematical Courses.</i>	<i>Chemical Course.</i>	<i>Biological, and Preparatory Medical Course.</i>
General English Literature and History..... 2	Organic Chemistry ..... 4	Organic Chemistry..... 4
Analytical Chemistry..... 2	General English Literature and History..... 2	Zoölogy of Farm Animals.. 3
Advanced Physics: electrical measurements and testing of instruments..... 3	Analytical Chemistry..... 3	General English Literature and History..... 2
Calculus..... 4	Volumetric Analysis ..... 2	Analytical Chemistry..... 3
*Elective ..... 6	*Elective..... 6	Volumetric Analysis ..... 2
		*Elective..... 3

## WINTER TERM.

General English Literature and History..... 2	Organic Chemistry ..... 4	General English Literature and History..... 2
Calculus..... 4	General English Literature and History..... 2	Comparative Anatomy..... 3
Advanced Physics: direct current, construction of dynamos and motors, tests of efficiency..... 3	Sanitary Chemistry ..... 2	Sanitary Chemistry..... 2
*Elective..... 8	Quantitative Analysis (gravimetric)..... 3	Quantitative Analysis..... 3
	Mineralogy and blowpipe... 3	Organic Chemistry..... 4
	*Elective..... 3	*Elective ..... 3

## SPRING TERM.

General English Literature and History..... 2	General English Literature and History..... 2	General English Literature and History..... 2
Advanced Physics: alternating current, manipulation of alternators, transformers..... 3	Organic Chemistry..... 3	Entomology ..... 3
*Elective.....12	Industrial Chemistry..... 3	Comparative Invertebrate Zoölogy ..... 3
	Quantitative Analysis (gravimetric)..... 3	*Elective..... 9
	*Elective..... 6	

\* At least one-half the electives in the Agricultural course must be chosen from subjects directly bearing on agriculture.

A list of electives will be announced at the close of each year.

*SENIOR.*

## FALL TERM.

<i>Agricultural Course.</i>	<i>Mechanical Course.</i>
Agricultural Chemistry..... 3	Applied Mechanics..... 5
Political Science..... 3	Steam-Engine Design..... 3
*Elective.....11	Engineering Laboratory..... 3
	Power Transmission..... 3
	Chemical Engineering..... 3
	Analytical Mechanics..... 3

## WINTER TERM.

Political Science..... 3	Applied Mechanics..... 5
*Elective.....12	Steam-Engine Design..... 3
	Engineering Laboratory..... 3
	Wool and Cotton Machinery..... 3
	Specifications and Contracts..... 3
	Inspection Excursions.....
	Thesis Work..... 2

## SPRING TERM.

Political Science..... 3	Hydraulics..... 5
*Elective.....14	Mill and Factory Designs..... 3
	Engineering Laboratory..... 3
	Wool and Cotton Machinery..... 3
	Specifications and Contracts..... 3
	Inspection Excursions.....
	Thesis Work..... 2

---

\* At least one-half the electives must be chosen from subjects directly bearing on Agriculture.

*SENIOR.—Continued.*

## FALL TERM.

<i>Physical and Mathematical Courses.</i>	<i>Chemical Course.</i>	<i>Biological, and Preparatory Medical Course.</i>
Projective Geometry..... 3	Organic Chemistry..... 3	†Bacteriology..... 3
Advanced Physics: wiring of buildings, switch boards, systems of regulation, subways..... 3	Textile Coloring..... 3	Civil Government..... 3
Modern Methods in Analyt-ics..... 3	Agricultural Chemistry..... 3	Scientific French or German 3
Heating and Ventilation of Buildings..... 3	Gas Analysis..... 3	Organic Chemistry..... 3
Analytical Mechanics..... 3	Physiological Chemistry.... 3	Physiological Chemistry .... 3
	Thesis Work..... 2	Comparative Physiology.... 1
		†If not taken the previous year.

*Given in alternate years.*—Economic Fungi (exclusive of bacteria), 3; Bacteriology, 3.

## WINTER TERM.

Differential Equations..... 3	Organic Chemistry..... 3	Psychology..... 3
Theory of Functions..... 3	Textile Coloring..... 3	Organic Chemistry..... 3
Theory of Equations..... 3	Agricultural Chemistry..... 3	Physiological Chemistry.... 3
Advanced Physics: photo-metric and electric tests of lamps, safety and distributing devices..... 3	Physiological Chemistry.... 3	Comparative Physiology.... 6
Inspection Excursions.....	Electro-Chemistry..... 3	
Thesis Work..... 2	Thesis Work..... 2	

## SPRING TERM.

Differential Equations..... 3	Organic Chemistry..... 3	Economic Entomology, elec-tive..... 2
Theory of Functions..... 3	Textile Fabrics and Machinery, with excursions to manufactories..... 3	Organic Chemistry..... 3
Theory of Equations..... 3	Agricultural Chemistry.... 3	Physiological Chemistry.... 3
Methods of Teaching Math-ematics..... 1	Physiological Chemistry.... 3	Comparative Physiology.... 9
Advanced Physics: traction work and transmission of power..... 3	Thesis Work..... 2	(In Botany and Zoölogy individual arrangements are to be made with heads of depart-ments.)
Inspection Excursion.....		
Thesis Work..... 2		

## AGRICULTURAL COLLEGE EXTENSION.

**F**OR the benefit of persons within the State who cannot attend the college as students, the faculty has arranged a course of study, known as the Agricultural College Extension. The plan, which is similar to that of the Chautauqua Reading Circle, provides a course of study embodying lines in agriculture and horticulture, as well as studies in literature and the sciences.

The course of study is designed to meet the requirements of anyone who may choose to pursue it. To complete the course, a satisfactory examination on at least one book under each number of the three years' course, given below, must be passed.

Candidates upon completing the course will receive a diploma.

### COURSE OF STUDY.

		Publisher's Price.	Price to Members of the Extension.	Postage.
<i>FIRST YEAR.</i>				
1.	{ First Principles of Agriculture. <i>Voorhees</i> .....	\$ 72	\$ 72	\$ 08
	{ American Literature. <i>Hawthorne and Lemmon</i> .....		1 12	10
2.	{ Home Floriculture. <i>Rexford</i> .....	1 50	1 20	08
	{ Silo, Ensilage, and Silage. <i>Miles</i> .....	50	38	04
3.	{ Helps for Home Makers. <i>Mary Blake</i> .....	75	56	08
	{ Insects and Insecticides. <i>Weed</i> .....	1 25	1 00	08
4.	{ The Human Body (Briefer Course). <i>Martin</i> .....		1 20	10
	{ Feeding Animals. <i>Stewart</i> .....	2 00	1 60	12
5.	{ American History. <i>Montgomery</i> .....		1 00	11
	{ Manual of the Constitution. <i>Andrews</i> .....		1 00	08

## SECOND YEAR.

	Publisher's Price.	Price to Members of the Extension.	Postage.
1. { Soils and Crops. <i>Morrow and Hunt</i> .....	\$1 00	75	06
{ Representative English Literature. <i>Pancoast</i> .....		1 60	12
2. { Text-Book of Botany.....			
{ Horses, Cattle, Sheep, and Swine. <i>Curtis</i> ..	2 00	1 60	12
{ Ornamental Gardening for Americans. <i>Long</i> .....	2 00	1 50	08
{ How the Farm Pays. <i>Henderson and Crozier</i> .....	2 50	1 88	12
3. { How to Make the Garden Pay. <i>Greiner</i> .....	2 00	1 60	12
{ Profitable Poultry Keeping. <i>Beale</i> .....	1 50	1 12	08
{ Anna Maria's Housekeeping. <i>Power</i> ..	75	56	08
4. { Stock Breeding. <i>Miles</i> .....	1 50	1 12	12
{ English History. <i>Montgomery</i> ..		1 12	11
5. { Political Economy (Briefer Course). <i>Walker</i> .....		1 00	08
{ Astronomy. <i>Newcomb</i> .....		1 30	12

## THIRD YEAR.

1. { Practical Farm Chemistry. <i>Greiner</i> .....	\$1 00	\$ 80	06
{ General History. <i>Meyers</i> .....		1 50	15
2. { A Text-Book of Chemistry.....			
{ The Nursery Book. <i>Bailey</i> .....	1 00	80	06
{ Drainage for Profit and Health. <i>Waring</i> .....	1 50	1 12	08
3. { Langstroth on the Hive and Honey Bee. (Dadant's Revision).....		1 12	08
{ American Fruit Culturist. <i>Thomas</i> .....	2 50	2 00	22
{ American Dairying. <i>Gurler</i> .....	1 00	80	06
{ Green-House Construction. <i>Taft</i> .....	1 50	1 20	08
{ Horse Breeding. <i>Sanders</i> .....	2 00	1 50	12
4. { Our Farming. <i>Terry</i> .....	2 00	1 60	13
{ English translations from a foreign literature. (Books will be recommended later according to the subject chosen.)			
5. { The New Womanhood. <i>Fernald</i> ..	1 25	94	08
{ Advanced Course in Political Economy. <i>Walker</i>		2 00	15
{ Soils and Rocks. <i>Stockbridge</i> .....	2 50	2 25	12

## SUPPLEMENTARY READING.

Below is a list of books which the faculty recommends as reading supplementary to the above course; the same is suggested as a desirable list of books for the home, grange or town library.

	Publisher's Price.	Price to Members.	Pos- tage.
Agriculture (3 vols). <i>Storer</i> .....	\$5 00	\$5 00	\$ 36
Talks on Manures. <i>Harris</i> .....	1 75	1 31	08
Practical Dairy Husbandry. <i>Willard</i> .....	3 00	2 00	16
The Grasses of North America. (Vol. I.) <i>Beal</i> ....	2 50	2 25	10
“ “ “ (Vol. II.) <i>Beal</i> .....	5 00	4 50	29
Turkeys and How to Raise Them. <i>Myrick</i> .....	1 00	75	07
The Spraying of Plants. <i>Lodeman</i> .....	1 00	80	07
Plant Breeding. <i>Bailey</i> .....	1 00	80	07
Soils. <i>King</i> ... ..	75	60	05
Manures, How to Make and How to Use Them. <i>Burpee</i> .	50	38	08
The Earth and its Story. <i>Heilprin</i> . .....	1 00	1 00	08
Fungi and Fungicides. <i>Weed</i> .....	1 00	75	07
Survival of Unlike. <i>Bailey</i> .....	2 00	1 60	10
Horticultural Rule Book. <i>Bailey</i> .....	75	60	06
Rural Grape Training. <i>Bailey</i> .....	75	65	04
Vegetable Gardening. <i>Greene</i> .....			
The Farmer's Veterinary Adviser. <i>Law</i> .....	3 00	2 40	16
Plant Life on the Farm. <i>Masters</i> .....	1 00	75	06
The Shepherd's Manual. <i>Stewart</i> .....	1 50	1 12	11
Harris on the Pig. <i>Harris</i> .....	1 50	1 12	08
Practical Poultry Keeping. <i>Wright</i> .....	2 00	1 50	12
The Book of Poultry. <i>Wright</i> . } .....	5 00	3 75	24
Colored Plates. } .....	12 50	9 38	32
How Crops Feed. <i>Johnson</i> .....	1 50	1 12	11
How Crops Grow. <i>Johnson</i> .....	1 50	1 12	11
A B C of Bee Culture. <i>Root</i> .....	1 25	1 00	12
A Modern Bee Farm. <i>Simmins</i> .....			
Bees and Bee-Keeping. (2 vols.) <i>Cheshire</i> .....			
The Production of Comb Honey. <i>Hutchinson</i> .....		25	
The Production of Extracted Honey. <i>Cowan</i> .....			
The Incubator and its Use. <i>Rankin</i> .....			
Poultry for Profit. <i>Jacobs</i> .....			

	Publisher's Price.	Price to Members.	Pos- tage.
Incubators and Brooders. <i>Jacobs</i> .....			
Natural and Artificial Duck Raising. <i>Rankin</i> .....			
Poultry. (A Treatise on Raising Broilers and Ducks by Artificial Means.) <i>McFetridge</i> .....			
Hand-book of Plants. <i>Henderson</i> .....	\$4 00	\$3 20	\$ 28
Flowers, Fruits, and Leaves. <i>Sir John Lubbock</i> .....			
How to Know the Wild Flowers. <i>Dana</i> .....		1 50	Free.
Origin of Species. <i>Darwin</i> .....	2 00	1 50	14
Animals and Plants under Domestication. (2 vols.) <i>Darwin</i> .....	5 00	3 75	28
The American Commonwealth. <i>Bryce</i> .....		3 50	Free.
Letters to a Daughter. <i>Starrett</i> .....	75	60	06
How the Other Half Live. <i>Rüs</i> .....		1 25	06
Amenities of Home.....	60	45	05
How to Win. <i>Frances E. Willard</i> .....	1 00	75	07
New England Legends and Folk Lore. <i>Drake</i> .....	2 00	1 50	12
A Nameless Nobleman. <i>Jane Austin</i> .....	1 25	94	08
Dr. LeBaron and His Daughter. <i>Jane Austin</i> .....	1 25	94	08
Standish of Standish. <i>Jane Austin</i> .....	1 25	94	08
Betty Alden. <i>Jane Austin</i> .....	1 25	94	08
Half Hours with American History. (2 vols.) <i>Morris</i> ..	3 00	2 25	24
Masterpieces of American Literature.....		1 00	08
Riverside Literature Series.....		15	Free.
A Short History of the English People. <i>Green</i> .....		1 20	15
Student's History of England. <i>Gardiner</i> ..		3 00	15
Readings from English History. <i>J. R. Green</i> .....	1 50	1 12	12
English Classic Series.....		12	Free.
Public Opinion (Periodical) ..			

Any of the above books may be bought of The Rhode Island News Company, 113 and 115 Westminster Street, Providence, by members of the Extension Course, at the special price given.

Further information regarding the course may be obtained by consulting Part I of the 1896 report or by writing to the address below.

J. H. WASHBURN, *President*,

Kingston, R. I.

*MILITARY ORGANIZATION.**COMPANY A.*

B. E. KENYON, Captain.

W. F. OWEN.....	Second Lieutenant.
W. C. PHILLIPS .....	First Sergeant.
J. J. FRY.....	Sergeant.
A. E. MUNRO.....	Sergeant.
M. R. CROSS.....	Sergeant.
J. R. ELDRÉD.....	Sergeant.
A. A. SHERMAN.....	Corporal.

L. G. K. CLARNER.....	Corporal.
L. E. WIGHTMAN.....	Corporal.
LIEUT. W. F. OWEN .....	Battalion Adjutant.
LATHAM CLARKE.....	Bugler.

## *BOTANICAL CLUB.*

IN CHARGE OF THE PROFESSOR OF BOTANY.

---

Those interested in botanical subjects meet occasionally to discuss the local flora and simple botanical literature.

---

## *ZOÖLOGICAL CLUB.*

---

The Zoölogical Club meets bi-weekly for the study of the local fauna, for the presentation of brief papers, and for the review of current journals. A special room is devoted to the collections and preparations made by the club. The daily observations by the members upon the occurrence, habitat, structure, life history and habits of the animals are on file for ready reference. Special excursions are made to favorable localities. Opportunities for field work in zoölogy are remarkably fine.

### *OFFICERS.*

C. B. MORRISON.....	President.
H. KNOWLES.....	Secretary.
E. PAYNE.....	Curator.

*RELIGIOUS ORGANIZATIONS.*

*YOUNG MEN'S CHRISTIAN ASSOCIATION.*

		<hr/> \$15,000 00

WE, the undersigned, duly appointed auditors of the corporation, do hereby certify that we have examined the books and accounts of the Rhode Island State Agricultural Experiment Station for the fiscal year ending June 30, 1898; that we have found the same well kept, and classified as above, and that the receipts for the year from the treasurer of the United States are shown to have been \$15,000, and the corresponding disbursements \$15,000, for all of which proper vouchers are on file, and have been by us examined and found correct, thus leaving no balance.

And we further certify that the expenditures have been solely for the purposes set forth in the act of Congress approved March 2, 1887.

Signed,

HENRY L. GREENE,

J. V. B. WATSON,

*Auditors.*

I hereby certify that the above is a true copy from the books of the account of the institution named.

MELVILLE BULL,

*Treasurer of the Rhode Island College of Agriculture and Mechanic Arts.*

I hereby certify that the above signature is that of the treasurer of the Rhode Island College of Agriculture and Mechanic Arts.

H. L. GREENE,

*President of the Board of Managers of the Rhode Island College of Agriculture and Mechanic Arts.*

---

MELVILLE BULL, *Treasurer, in account with the* RHODE ISLAND AGRICULTURAL EXPERIMENT STATION.
