Data based on 1993 information from the Bureau of the Census (Housing & Household Economic Statistics Division).

- Each table is based on the authorization level for the specific version analyzed. The authorization level is the ceiling for actual appropriations—the amount above which funding cannot rise. This means the table for H.R. 1617 is based on \$110 million; funding could never be higher if it were enacted. The tables for S. 143 and the library group recommendations are based on \$150 million, the Senate-passed amount.
- In the Senate and library group compromise versions, the various setasides and national level programs have been subtracted (at their maximum level) from the authorized level, and the remainder allocated among the states. For instance, S. 143 calls for up to 10 percent set aside for federal level administration, 5-7 percent for joint library-museum projects (figured at 7%), 8 percent for the national leadership program in library science, and 1.5 percent for Indian library services. In the House version, items such as federal level administration and Indian services are funded separately; these items could indirectly affect LSTA funding levels, but are not taken directly from LSTA appropriations. The library group version reduces federal administration to a maximum of 5 percent.
- Population data for national, state, and children-in-poverty purposes is based on 1993 information from the Bureau of the Census (Housing & Household Economic Statistics Division).
- The “minimum allotment” is the base amount each state would receive no matter what its population—\$200,000 in H.R. 1617, \$400,000 in S. 143, $\left[\$340,000 \text{ (as in the current LSCA) in the library compromise.} \right]$ *Amount LSCA*
- The “population allocation” is the additional amount each state would receive based on its population compared to the total U.S. population.
- The “total allocation” is the sum of the previous two columns.
- The “children in poverty population allocation” shows the maximum amount in each state for this purpose when the formula of \$1.50 per preschooler and \$1.00 per school-age child is applied.
- The “capped amount for children in poverty” column shows the effect of the cap imposed by the Senate and retained in the library group compromise. The cap is 15 percent of funds available in a state for special services. Remember that a state uses half of its funding for technology purposes and half for special services under LSTA. For the special children-in-poverty setaside, a state would use the amount set by the \$1.50 and \$1.00 formula unless the capped amount is less, in which case the cap becomes the maximum amount available for the special children-in-poverty setaside.
